Preface

Follow the instructions in *MDM Extension for Snowflake* to deploy MDM Extension for Snowflake.

Informatica Resources

Informatica provides you with a range of product resources through the Informatica Network and other online portals. Use the resources to get the most from your Informatica products and solutions and to learn from other Informatica users and subject matter experts.

Informatica Documentation

Use the Informatica Documentation Portal to explore an extensive library of documentation for current and recent product releases. To explore the Documentation Portal, visit https://docs.informatica.com.

If you have questions, comments, or ideas about the product documentation, contact the Informatica Documentation team at infa_documentation@informatica.com.

IDMC web site

You can access the Informatica® Intelligent Data Management Cloud™ (IDMC) web site at http://www.informatica.com/cloud.

Intelligent Data Management Cloud Communities

Use the IDMC Community to discuss and resolve technical issues. You can also find technical tips, documentation updates, and answers to frequently asked questions.

To access the IDMC Community, see Master Data Management SaaS Community.

Developers can learn more and share tips at the Cloud Developer community:

https://network.informatica.com/community/informatica-network/products/cloud-integration/cloud-developers

IDMC Marketplace

Visit the Informatica Marketplace to try and buy Data Integration Connectors, templates, and mapplets:

https://marketplace.informatica.com/

Informatica Knowledge Base

Use the Informatica Knowledge Base to find product resources such as how-to articles, best practices, video tutorials, and answers to frequently asked questions.

To search the Knowledge Base, visit https://search.informatica.com. If you have questions, comments, or ideas about the Knowledge Base, contact the Informatica Knowledge Base team at KB_Feedback@informatica.com.

IDMC Trust Center

The IDMC Trust Center provides information about Informatica security policies and real-time system availability.

You can access the trust center at https://www.informatica.com/trust-center.html.

Subscribe to the IDMC Trust Center to receive upgrade, maintenance, and incident notifications. The Informatica Intelligent Data Management Cloud Status page displays the production status of all the Informatica cloud products. All maintenance updates are posted to this page, and during an outage, it will have the most current information. To ensure you are notified of updates and outages, you can subscribe to receive updates for a single component or all IDMC components. Subscribing to all components is the best way to be certain you never miss an update.

Informatica Global Customer Support

You can contact a Global Support Center through the Informatica Network or by telephone.

To find online support resources on the Informatica Network, click **Contact Support** in the IDMC Help menu to go to the **Cloud Support** page. The **Cloud Support** page includes system status information and community discussions. Log in to Informatica Network and click **Need Help** to find additional resources and to contact Informatica Global Customer Support through email.

The telephone numbers for Informatica Global Customer Support are available from the Informatica web site at https://www.informatica.com/services-and-training/support-services/contact-us.html.

CHAPTER 1

Introducing MDM Extension for Snowflake

An MDM SaaS extension is a ready-to-use package that streamlines and accelerates the implementation of MDM SaaS. MDM SaaS extensions contain pre-configured assets and integrations that extend and enhance the MDM SaaS business applications. Use an extension to reduce implementation time, enhance data quality, and achieve faster business outcomes.

Use MDM Extension for Snowflake to publish master data from MDM SaaS to Snowflake. You can leverage the published data for various analytics and reporting use cases, such as enhanced customer insights and supply chain analytics. You can also monitor sustainable sourcing, risks, and ESG data compliance of a supplier.

The extension includes the predefined Data Integration assets and staging schema for Snowflake to publish master data from MDM SaaS to the staging tables in Snowflake.

The extension also includes a sample analytical schema for Snowflake. You can use the predefined Data Integration assets to load data into the dimension and fact tables of the analytical schema in Snowflake.

Use MDM Extension for Snowflake to achieve the following goals:

Enhance customer analytics and insights

Provide accurate customer segmentation and measures, such as loyalty and lifetime value, for personalized customer experience and improved customer satisfaction.

Improve supply chain agility and omnichannel commerce

Improve the visibility of a supplier network, spending, performance, risk and ratings. You can streamline the management of large and dynamic product portfolios.

Analyze ESG risk of a supply chain

Calculate supply chain emissions, identify suppliers with the highest impact, and reduce ESG risks.

Enhance strategies using location-based analytics

Use location-based insights, such as sales performance and trends by store location and inventory analysis by warehouse location, to drive strategic decisions. Leverage these insights to launch effective marketing campaigns, enhance sales opportunities, and assess revenue.

Guidelines for importing assets

Consider the following guidelines before you import the extension assets:

- Set up the prerequisite MDM SaaS business application.
- Import the extension assets before you customize the business entities. You can safely import multiple extension assets that use different business entities and in different MDM SaaS business applications. When you import the assets in an environment that already has an extension with the same business entities, the import fails.
- After you import the assets, consider them as your custom assets.
- Once you deploy an extension, upgrading to a newer version of the extension isn't supported.

Guidelines for migrating assets

Consider the following guidelines before you migrate the extension assets to another environment:

- To migrate the extension assets to higher environments, such as QA and production, export the assets from the development environment. Then, import them into the QA and production environments. For more information about migrating assets, see *Migrating projects and assets*.
- Don't import the extension assets again into a higher environment.

Prerequisites

Before you deploy the MDM Extension for Snowflake, perform the following prerequisites:

- Ensure that you have the license for the Integration Components for Business 360, MDM SaaS edition, and Snowflake Data Cloud Connector.
- Ensure that you have the licenses required to manage connections, external data, and service rights.

  Note: The use of the extension doesn't confer any additional license or entitlement to license consumption beyond the terms specified in the applicable licensing agreements.
- Ensure that the version of the industry 360 application package matches the current MDM SaaS version where you import the industry 360 application assets.

  If the version of the industry 360 application package doesn't match the current MDM SaaS version, contact Informatica Global Customer Support to use the current version of the industry 360 application.

  To verify the MDM SaaS version, in Business 360 Console, click **About** in the IDMC Help menu and verify the build version.

  To verify the version of the industry 360 application, navigate to the readme.txt file in the extracted industry 360 application package.

CHAPTER 2

MDM SaaS and Snowflake integration

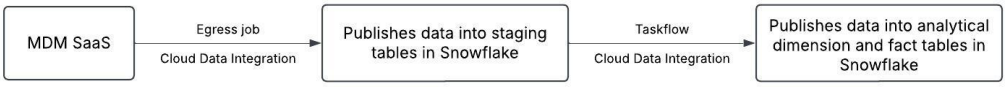

Use MDM Extension for Snowflake to integrate MDM SaaS with Snowflake.

Use the MDM SaaS batch jobs and Cloud Data Integration assets to publish data from MDM SaaS to Snowflake.

Data flow to publish master data to Snowflake

You can use egress jobs to publish master data from MDM SaaS to the staging tables in Snowflake. Use Cloud Data Integration taskflows to publish data from the staging tables in Snowflake into the analytical dimension and fact tables in Snowflake.

The following image shows the flow of data from MDM SaaS to Snowflake:

When you run MDM SaaS egress jobs, Cloud Data Integration exports MDM SaaS master data, such as customer, product, supplier, and location master data, into the staging tables in Snowflake.

When you run Cloud Data Integration taskflows, Cloud Data Integration transforms and publishes data from the staging tables in Snowflake into the analytical dimension and fact tables in Snowflake.

MDM SaaS master data

Based on your MDM SaaS domain, MDM Extension for Snowflake uses its corresponding data model.

The following table lists the MDM SaaS domains and their corresponding data model details:

MDM SaaS Domain	Data Model Reference
Customer	*Customer 360 SaaS data dictionary*
Location	*Location 360 data dictionary*
Product	*Product 360 SaaS data dictionary*
Supplier	*Supplier 360 Extension for ESG data dictionary*

Staging schema

Use predefined egress jobs to publish master data from MDM SaaS to the staging schema in Snowflake.

When you run egress jobs based on the type of records that you manage in MDM SaaS, the master data is published into the tables of the staging schema in Snowflake.

The following table lists the staging schema in Snowflake for MDM SaaS record types:

MDM SaaS Record Type	Staging Schema
Customer	informatica_customer_master_stg
Product	informatica_product_master_stg
Product Releationship	informatica_item_category_relationship_stg
Supplier	informatica_supplier_master_stg
Location	informatica_location_master_stg

Analytical schema

The analytical schema is a repository for master and transactional data in Snowflake. Use the analytical schema to gain insights into the data.

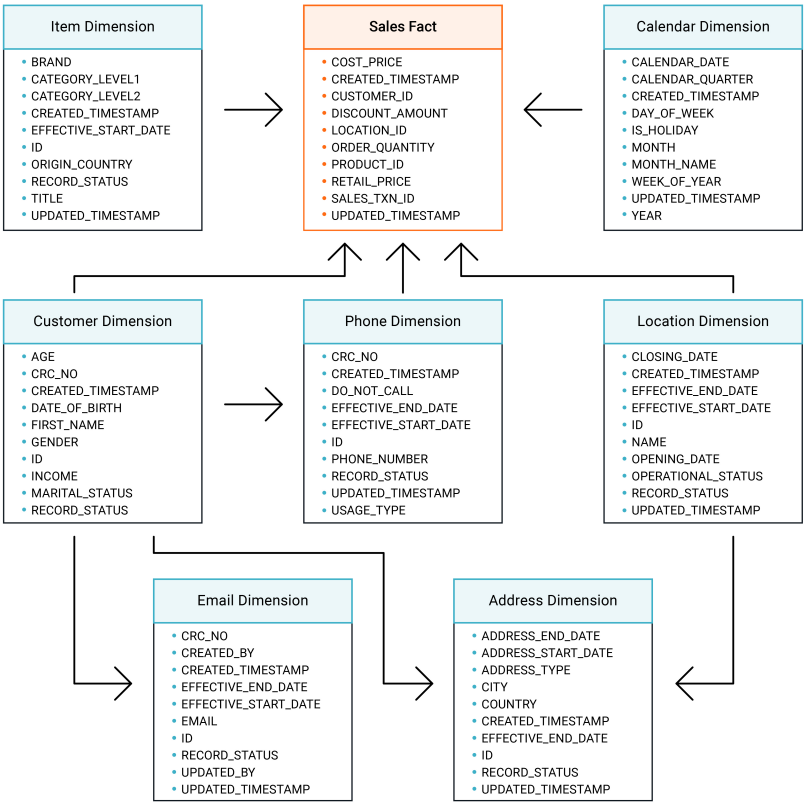

When you run Cloud Data Integration taskflows, Cloud Data Integration transforms and publishes master data from the Snowflake staging tables into the dimension and fact tables of the analytical schema in Snowflake.

The analytical schema named `INFARETAIL_SNOWFLAKE_ANALYTICS` includes the following dimension and fact tables:

- tbl_address_dim
- tbl_calendar_dim
- tbl_customer_dim
- tbl_email_dim
- tbl_esg_score_dnb_dim
- tbl_esg_score_dnb_environmental_reason_dim
- tbl_esg_score_dnb_governance_reason_dim
- tbl_esg_score_dnb_social_reason_dim
- tbl_item_dim
- tbl_location_dim
- tbl_phone_dim
- tbl_supplier_dim
- tbl_sales_txn_fact
- tbl_supplier_order_txn_fact

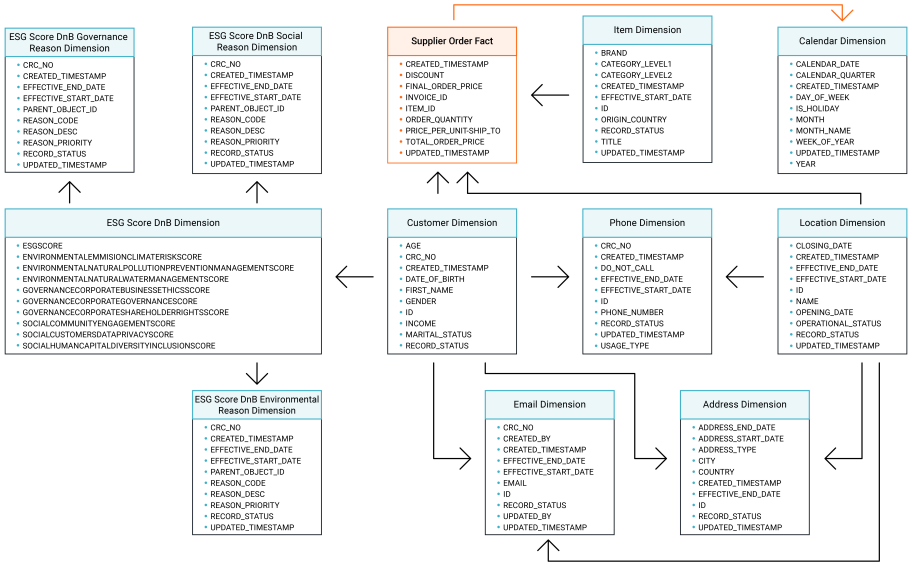

Based on your use case, you can create or edit the dimension and fact tables.

The following image shows the dimension tables of the Snowflake analytical schema and their relationships with the Sales fact table:

Note: Some tables contain more fields than shown in the diagram. For details, refer to the analytical schema in Snowflake.

The following image shows the dimension tables of the Snowflake analytical schema and their relationships with the Supplier Order fact table:

Note: Some tables contain more fields than shown in the diagram. For details, refer to the analytical schema in Snowflake.

CHAPTER 3

Predefined MDM Extension for Snowflake assets

The extension package includes the following predefined assets:

- Data definition language (DDL) scripts to create the database, staging schema, analytical schema, and sample views in Snowflake.
- MDM SaaS batch jobs
- Cloud Data Integration assets
- Secure Agent group parameter files

Note: When you import the MDM Extension for Snowflake assets, the existing MDM SaaS assets and your customizations are overwritten. Ensure that you import the assets of the extension before you customize the MDM SaaS data model.

Data Definition Language (DDL) scripts

Use DDL scripts to create the database, staging schema, analytical schema, and sample views in Snowflake.

You can use the script to create the database in Snowflake. You can then use the scripts to create the staging schema in Snowflake for customer, supplier, product, and location master data. You can also use the scripts to create enhanced analytical schema for customer, supplier, and location analytics.

MDM Extension for Snowflake also includes sample views. Views are logical tables defined using SQL queries. When you run an SQL query in Snowflake, you can use the views to visualize data in Snowflake.

Cloud Data Integration assets

MDM Extension for Snowflake includes predefined egress jobs and Cloud Data Integration assets. You can use predefined egress jobs to publish master data from MDM SaaS to the staging tables in Snowflake. You can then use predefined Cloud Data Integration taskflows to publish data from the staging tables into the analytical dimension and fact tables in Snowflake.

Assets for customer data

Use predefined egress jobs to export master data from Customer 360 SaaS to the staging tables in Snowflake. Use the predefined Cloud Data Integration taskflow to publish data from the staging tables into the analytical dimension and fact tables in Snowflake.

The following table lists the predefined egress jobs and their dependent assets to export master data from Customer 360 SaaS to Snowflake:

Job Name	Taskflow	Mapping Task	Mapping	Description
infa360snflk_customer_egress_org_snflk_outbound_org_stage	infa360snflk_customer_tf_org_snflk_outbound_org_stage	- infa360snflk_customer_mt_org_address_snflk_outbound_org_address - infa360snflk_customer_mt_org_alternateName_snflk_outbound_org_alternateName - infa360snflk_customer_mt_org_document_snflk_outbound_org_document - infa360snflk_customer_mt_org_email_snflk_outbound_org_email - infa360snflk_customer_mt_org_financial_snflk_outbound_org_financial - infa360snflk_customer_mt_org_identifier_snflk_outbound_org_identifier - infa360snflk_customer_mt_org_indicator_snflk_outbound_org_indicator - infa360snflk_customer_mt_org_insurance_snflk_outbound_org_insurance - infa360snflk_customer_mt_org_keyexecutive_snflk_outbound_org_keyexecutive - infa360snflk_customer_mt_org_phone_snflk_outbound_org_phone - infa360snflk_customer_mt_org_root_snflk_outbound_org_customer - infa360snflk_customer_mt_org_segment_snflk_outbound_org_segment - infa360snflk_customer_mt_org_socialhandle_snflk_outbound_org_socialhandle - infa360snflk_customer_mt_org_status_snflk_outbound_org_status	- infa360snflk_customer_m_org_address_snflk_outbound_org_address - infa360snflk_customer_m_org_alternateName_snflk_outbound_org_alternateName - infa360snflk_customer_m_org_document_snflk_outbound_org_document - infa360snflk_customer_m_org_email_snflk_outbound_org_email - infa360snflk_customer_m_org_financial_snflk_outbound_org_financial - infa360snflk_customer_m_org_identifier_snflk_outbound_org_identifier - infa360snflk_customer_m_org_indicator_snflk_outbound_org_indicator - infa360snflk_customer_m_org_insurance_snflk_outbound_org_insurance - infa360snflk_customer_m_org_keyexecutive_snflk_outbound_org_keyexecutive - infa360snflk_customer_m_org_phone_snflk_outbound_org_phone - infa360snflk_customer_m_org_root_snflk_outbound_org_customer - infa360snflk_customer_m_org_segment_snflk_outbound_org_segment - infa360snflk_customer_m_org_socialhandle_snflk_outbound_org_socialhandle - infa360snflk_customer_m_org_status_snflk_outbound_org_status - infa360snflk_customer_m_org_stockexchange_snflk_outbound_org_stockexchange - infa360snflk_customer_m_org_taxdetails_snflk_outbound_org_taxdetails	Exports customer data from Customer 360 SaaS to the staging tables in Snowflake.

Assets for location data

Use predefined egress jobs to export master data from Multidomain MDM SaaS to the staging schema in Snowflake. Use the predefined Cloud Data Integration taskflow to publish data from the staging tables into the analytical dimension and fact tables in Snowflake.

The following table lists the predefined egress jobs and their dependent assets to export master data from Multidomain MDM SaaS to Snowflake:

Job Name	Taskflow	Mapping Task	Mapping	Description
- infa360snflk_egress_multidomain_location_xref_snflk_outbound_location_xref - infa360snflk_egress_multidomain_location_snflk_outbound_location_stage	- infa360snflk_location_tf_multidomain_location_xref_snflk_outbound_location_xref - infa360snflk_location_tf_multidomain_location_snflk_outbound_location_stage	- infa360snflk_location_mt_location_operatingHours_snflk_outbound_location_operatingHours - infa360snflk_location_mt_location_positions_snflk_outbound_location_positions - infa360snflk_location_mt_location_altName_snflk_outbound_location_altName - infa360snflk_location_mt_location_identifier_snflk_outbound_location_identifier - infa360snflk_location_mt_location_indicator_snflk_outbound__location_indicator - infa360snflk_location_mt_location_phone_snflk_outbound_location_phone - infa360snflk_location_mt_location_email_snflk_outbound_location_email - infa360snflk_location_mt_location_status_snflk_outbound_location_status - infa360snflk_location_mt_location_root_snflk_outbound_location_root - infa360snflk_location_mt_location_operatingHoursException_snflk_outbound_location_operatingHoursException - infa360snflk_location_mt_location_geoloc_snflk_outbound_location_geoloc	- infa360snflk_location_m_location_identifier_snflk_outbound_location_identifier - infa360snflk_location_m_location_root_snflk_outbound_location_root - infa360snflk_location_m_location_status_snflk_outbound_location_status - infa360snflk_location_m_location_operatingHours_snflk_outbound_location_operatingHours - infa360snflk_location_m_location_altName_snflk_outbound_location_altName - infa360snflk_location_m_location_indicator_snflk_outbound__location_indicator - infa360snflk_location_m_location_coordinates_snflk_outbound_location_coordinates - infa360snflk_location_m_location_address_snflk_outbound_location_address - infa360snflk_location_m_location_operatingHoursException_outbound_location_operatingHoursException - infa360snflk_location_m_location_positions_snflk_outbound_location_positions - infa360snflk_location_m_location_phone_snflk_outbound_location_phone - infa360snflk_location_m_location_email_snflk_outbound_location_email - infa360snflk_location_m_location_geoloc_snflk_outbound_location_geoloc	Exports location data from Multidomain MDM SaaS to Snowflake.

Job Name	Taskflow	Mapping Task	Mapping	Description
		- infa360snflk_location_mt_location_address_snflk_outbound_location_address - infa360snflk_location_mt_location_coordinates_snflk_outbound_location_coordinates - infa360snflk_location_mt_location_xref_snflk_outbound_location_xref	- infa360snflk_location_m_location_xref_snflk_outbound_location_xref	

The following table lists the predefined taskflow, mapping tasks, and mappings to publish location data from the staging tables into the analytical dimension and fact tables in Snowflake:

Taskflow	Mapping Task	Mapping	Description
infa360snflk_tf_snflk_location_stage_snflk_retail_analytics	- infa360snflk_mt_snflk_location_stage_snflk_tbl_address_dim - infa360snflk_mt_snflk_location_stage_snflk_tbl_email_dim - infa360snflk_mt_snflk_location_stage_snflk_tbl_phone_dim - infa360snflk_mt_snflk_stage_snflk_tbl_location_dim - infa360snflk_mt_snflk_stage_snflk_tbl_location_dim_expire_merged_records	- infa360snflk_m_snflk_location_stage_snflk_tbl_address_dim - infa360snflk_m_snflk_location_stage_snflk_tbl_email_dim - infa360snflk_m_snflk_location_stage_snflk_tbl_phone_dim - infa360snflk_m_snflk_stage_snflk_tbl_location_dim - infa360snflk_m_snflk_stage_snflk_tbl_location_dim_expire_merged_records	Publishes location data from the Snowflake staging tables to the analytical dimension and fact tables in Snowflake.

CHAPTER 4

Deploying MDM Extension for Snowflake

Before you deploy MDM Extension for Snowflake, ensure that you have the license for the Integration Components for Business 360 and the MDM SaaS edition.

To deploy MDM Extension for Snowflake, perform the following tasks:

1. Download and extract the extension package.
2. Run the DDL scripts to create a database and schema in Snowflake.
3. Run the DDL scripts to create staging and analytical tables in Snowflake.
4. Import the Cloud Data Integration assets.
5. Import the MDM SaaS batch jobs.
6. Set the Secure Agent parameters.
7. Run egress jobs and taskflows.

Extracting the MDM Extension for Snowflake package

Download the MDM Extension for Snowflake package from the download site to a directory on your computer.

To get the link to the download site, contact Informatica Global Customer Support.

After you download the MDM Extension for Snowflake package, extract the package on your computer.

The extracted package contains the following files and folders:

File or Folder Name	Description
`1_Snowflake_Staging`	Folder that contains the `Snowflake_Staging.zip` file. The `Snowflake_Staging.zip` file contains scripts to create the Snowflake staging schema.
`2_Snowflake_Analytics`	Folder that contains the `Snowflake_Analytics.zip` file. The `Snowflake_Analytics.zip` file contains scripts to create the Snowflake analytical schema.

File or Folder Name	Description
3_DI_Assets_Staging	Folder that contains the following files: - Customer_Staging.zip. Contains Cloud Data Integration assets to write customer data to the Snowflake staging tables. - Product_Staging.zip. Contains Cloud Data Integration assets to write product data to the Snowflake staging tables. - Supplier_Staging.zip. Contains Cloud Data Integration assets to write supplier data to the Snowflake staging tables. - Location_Staging.zip. Contains Cloud Data Integration assets to write location data to the Snowflake staging tables.
4_DI_Assets_Analytics	Folder that contains the DI_Assets_Analytics.zip file. The DI_Assets_Analytics.zip file contains Cloud Data Integration assets to write data from the Snowflake staging schema to the analytical dimension and fact tables in Snowflake.
5_MDM_Jobs_Assets_Staging	Folder that contains the following files: - Customer_Jobs_Assets_Staging.zip. Contains egress jobs to publish customer to the Snowflake staging tables. - Product_Jobs_Assets_Staging.zip. Contains egress jobs to publish product data to the Snowflake staging tables. - Supplier_Jobs_Assets_Staging.zip. Contains egress jobs to publish supplier data to the Snowflake staging tables. - Location_Jobs_Assets_Staging.zip. Contains egress jobs to publish location data to the Snowflake staging tables.
Secure Agent Files	Contains parameter values for the Cloud Data Integration mappings.

Creating a database and schemas in Snowflake

After you download and extract the extension package, run the DDL scripts to create a database and then create staging and analytical schemas in Snowflake.

1. Log in to Snowflake.
2. Create an SQL worksheet.
3. Navigate to the following file:

   ```
   <Extracted extension
           package>/1_Snowflake_Staging/Snowflake_Staging.zip/1_db.sql
   ```

4. Copy the DDL scripts from the file to SQL worksheet, and click **Run**.

   The database, staging schema, and analytical schema are created in Snowflake.
   For more information about staging schema, see "Staging schema" on page 9. For more information about analytical schema, see "Analytical schema" on page 9.

Creating staging and analytical tables in Snowflake

After you create the database and schemas in Snowflake, run the DDL scripts in Snowflake to create the staging tables and analytical dimension and fact tables.

To create the staging tables in Snowflake, copy scripts from the following location to SQL worksheet, and click **Run**:

```
<Extracted extension
      package>1_Snowflake_Staging/Snowflake_Staging.zip/<Domain>_Stage.sql
```

To create the dimension and fact tables in Snowflake, copy scripts from the following location to SQL worksheet, and click **Run**:

```
<Extracted extension
          package>2_Snowflake_Analytics/Snowflake_Analytics.zip
```

Importing the Cloud Data Integration assets

Import the Cloud Data Integration assets, such as predefined taskflows, mapping tasks, and mappings for the staging and analytical schema in Snowflake.

Note: When you import the extension assets, the existing MDM SaaS assets and your customizations are overwritten. Ensure that you import the extension assets before you customize the MDM SaaS data model.

1. In Data Integration, click **Explore** > **Import**.
2. Navigate to the following file:

   ```
   <Extracted extension package>/3_DI_Assets_Staging/<Domain>_Staging.zip
   ```
3. Click **Open**.

   The **Import Assets** page lists the assets in the file.
4. Ensure that all the assets are selected and then click **Test**.

   In the **Select Assets** section, you can see the potential outcome of import for each asset.
5. Click **Import**.
6. On the **My Import/Export Logs** page, verify whether the import job is successful.
7. Navigate to the following file, and repeat steps 3 through 6:

   ```
   <Extracted extension package>/4_DI_Assets_Analytics/DI_Assets_Analytics.zip
   ```

Importing the batch job assets

Import the predefined batch job assets to publish MDM SaaS master data into the staging schema in Snowflake.

1. In Business 360 Console, click **Explore** > **Import**.
2. Navigate to the following file:

   ```
   <Extracted extension package>/5_MDM_Jobs_Assets_Staging/<Domain>_Jobs_Assets_Staging.zip
   ```
3. Click **Open**.

The **Import Assets** page lists the assets in the file.

4. Ensure that all the assets are selected, and click **Import**.
5. On the **My Import/Export Logs** page, verify whether the import job is successful.

Setting up the Secure Agent parameters

After you import the MDM SaaS batch jobs, set the Secure Agent parameters.

1. In Administrator, click **Runtime Environments**.
2. Expand the **Actions** menu for the Secure Agent, and select **Edit Secure Agent**.
3. In the **Custom Configuration Details** section, enter the following details:

Field Name	Value
Type	DTM
Name	SFTP_MaxWriteSize
Value	8192

4. To save the custom configuration of the Secure Agent, click **OK**.

   The Secure Agent restarts automatically within 10 minutes. To apply the properties immediately, you can restart manually. To avoid failure of any running task, ensure that no tasks run .

Importing the parameter file

Import the list of user-defined parameters and their associated values for Cloud Data Integration mappings.

To import the parameter file, save the parameter file in the Secure Agent installation directory.

Copy the parameter file from the source directory to the target Secure Agent installation directory.

Source: `<Extracted extension package>\Secure Agent Files\Parameter Files\Informatica.param`

Target: `<Secure Agent Installation Directory>\apps\Data_Integration_Server\data\userparameters`

Optionally, if you want to use a configured path for the target location, see Parameter file location.

Running the jobs and taskflows

After you integrate MDM SaaS with Snowflake, you can run egress jobs.

On the **My Jobs** page, verify whether the egress job is successful.

After you run egress jobs, run the following Cloud Data Integration taskflows in Cloud Data Integration to publish data from the staging tables into the analytical dimension and fact tables in Snowflake:

- infa360snflk_tf_snflk_customer_stage_snflk_retail_analytics
- infa360snflk_tf_snflk_item_stage_snflk_retail_analytics
- infa360snflk_tf_snflk_supplier_stage_snflk_retail_analytics
- infa360snflk_tf_snflk_txn_stage_snflk_retail_analytics
- infa360snflk_tf_snflk_location_stage_snflk_retail_analytics
