Preface

Read *What's New* to learn about new features, enhancements, and behavior changes in Customer 360 SaaS for the current release. You can also learn about upgrade steps that you might need to perform.

Informatica Resources

Informatica provides you with a range of product resources through the Informatica Network and other online portals. Use the resources to get the most from your Informatica products and solutions and to learn from other Informatica users and subject matter experts.

Informatica Documentation

Use the Informatica Documentation Portal to explore an extensive library of documentation for current and recent product releases. To explore the Documentation Portal, visit https://docs.informatica.com.

If you have questions, comments, or ideas about the product documentation, contact the Informatica Documentation team at infa_documentation@informatica.com.

IDMC web site

You can access the Informatica® Intelligent Data Management Cloud™ (IDMC) web site at http://www.informatica.com/cloud.

Intelligent Data Management Cloud Communities

Use the IDMC Community to discuss and resolve technical issues. You can also find technical tips, documentation updates, and answers to frequently asked questions.

To access the IDMC Community, see Master Data Management SaaS Community.

Developers can learn more and share tips at the Cloud Developer community:

https://network.informatica.com/community/informatica-network/products/cloud-integration/cloud-developers

IDMC Marketplace

Visit the Informatica Marketplace to try and buy Data Integration Connectors, templates, and mapplets:

https://marketplace.informatica.com/

Informatica Knowledge Base

Use the Informatica Knowledge Base to find product resources such as how-to articles, best practices, video tutorials, and answers to frequently asked questions.

To search the Knowledge Base, visit https://search.informatica.com. If you have questions, comments, or ideas about the Knowledge Base, contact the Informatica Knowledge Base team at KB_Feedback@informatica.com.

IDMC Trust Center

The IDMC Trust Center provides information about Informatica security, compliance, and privacy practices.

You can access the trust center at https://trust.informatica.com/.

Informatica Global Customer Support

You can contact a Global Support Center through the Informatica Network or by telephone.

To find online support resources on the Informatica Network, click **Contact Support** in the IDMC Help menu to go to the **Cloud Support** page. The **Cloud Support** page includes system status information and community discussions. Log in to Informatica Network and click **Need Help** to find additional resources and to contact Informatica Global Customer Support through email.

The telephone numbers for Informatica Global Customer Support are available from the Informatica web site at https://www.informatica.com/services-and-training/support-services/contact-us.html.

CHAPTER 1

October 2026

The October 2026 release of Customer 360 SaaS includes the following updates.

Changelog October 2026

Read the changelog to learn about significant changes to this publication for this release.

The following table describes changes in this publication:

Publication Date	Type of Change	Section Title
October 23, 2026	Added	CLAIRE Copilot access in "Changed Behavior" on page 12
October 22, 2026	Added	Default values in "Preview initiated" on page 7
October 21, 2026	Deleted	Default values in "New features and enhancements" on page 10
October 21, 2026	Deleted	Search filters in "Changed Behavior" on page 12
October 21, 2026	Modified	"Preview initiated" on page 7
October 21, 2026	Deleted	Tasks and tickets in "New features and enhancements" on page 10
October 21, 2026	Modified	"Preview lifted" on page 9
October 8, 2026	Added	Draft records in "Preview initiated" on page 7
October 8, 2026	Added	Edit in a table in "Preview initiated" on page 7
October 8, 2026	Deleted	Draft records in "New features and enhancements" on page 10
October 8, 2026	Deleted	Edit in a table in "New features and enhancements" on page 10

Publication Date	Type of Change	Section Title
October 8, 2026	Added	"Preview initiated" on page 7
October 8, 2026	Deleted	"New features and enhancements" on page 10
October 8, 2026	Added	"Match Analysis and Explainability dashboard" on page 12
October 8, 2026	Modified	"Preview initiated" on page 7
October 2, 2026	Modified	Multilingual picklist values in "Important notices and upcoming changes" on page 7
September 24, 2026	Added	#unique_14/unique_14_Connect_42_GUID-4FF6EF8C-2AB5-4329-BC57-9221DE382707
September 10, 2026	Initial publication	

Important notices and upcoming changes

The October 2026 release includes the following important notices:

Dropped support

Effective in the October 2026 release, Informatica drops support for the classic experience of the Source Records page and merge and unmerge tasks in the workflow inbox.

Previously, you could toggle between the classic and the new experiences. The new experience is now the only option for the Source Records page and the workflow inbox.

Preview initiated

Effective in the October 2026 release, the following functionalities are available for preview:

Search within field group entries

When you search for records using multiple filters on fields in the same field group or nested field group, the search evaluates the conditions within each entry, and returns a record only if a single entry matches all the conditions.

For example, a record contains home and office address entries in the Address field group. The home address has city New York and street Main Street. The office address has city Chicago and street Oak Avenue.

A filtered search with city Chicago and street Main Street returns no record because no single address entry matches both conditions.

Previously, the search returned the record if the conditions matched across different entries.

Multilingual picklist values

When you access business applications in a localized language through your browser locale, picklist field values appear in the same language. You can now search for records with picklist values in any enabled language, regardless of your browser locale. When you use a filtered search, the filters display picklist values based on your browser locale. When you sort records or use auto-suggest, MDM SaaS continues to use the default language configured for the field values.

For more information, see *Manage localized assets* in Reference 360 Help.

Edit in a table

From the Edit in Table page, you can resolve conflicts and clone records.

- When other users update the same fields of a record before you submit your drafts, you can resolve the conflicts by keeping your updates or updates of other users.
- You can clone records to start with draft copies instead of creating new records from scratch. You can clone up to 10 records at a time. The draft copy contains the values of root fields and field groups from the original record.

Draft records

When you create or edit a record, the changes are now automatically saved as a draft before you submit or send the record for approval. If another user updates the same record, you can synchronize your draft with their updates or resolve conflicts. You can manage all your drafts on the My Drafts page, where you can search for specific drafts, open them for editing, or discard them.

Task inbox and ticket manager

You can view, act on, assign, and comment on the tasks assigned to you in the task inbox of business applications. You can assign, act on, or comment on tasks individually or on multiple tasks at once. You can also track the status of your updates in the ticket manager. A ticket is created automatically when a workflow is triggered, and shows workflow milestones, statuses of all the tasks in a workflow, and the comments as reviewers complete their tasks.

For example, a ticket for a product onboarding workflow lists all the tasks, such as validation of product name, brand name, and description, and approval or rejection of the product. The ticket is closed after the product is approved or rejected.

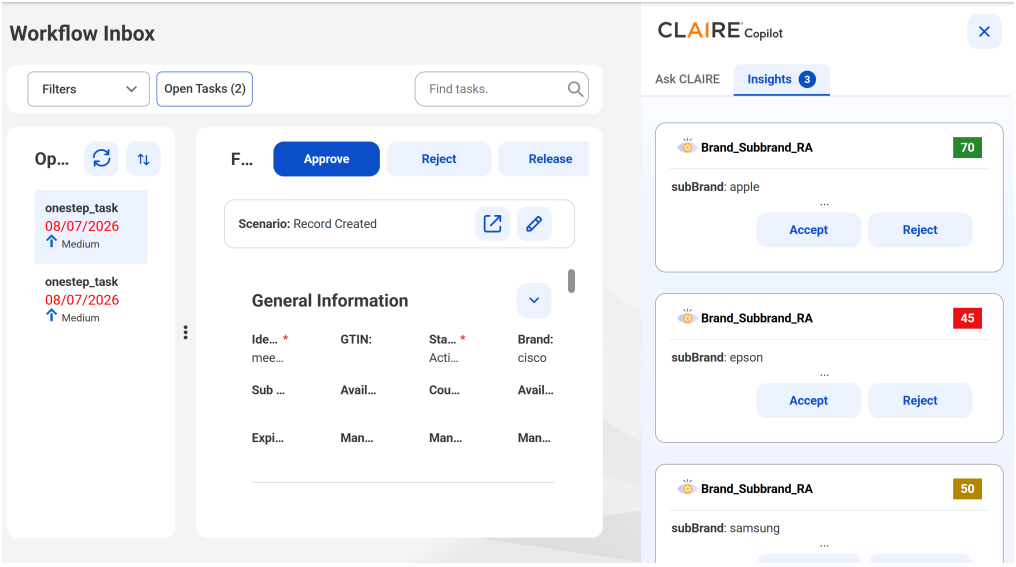

CLAIRE Copilot

You can use the product experience agent in CLAIRE Copilot to enrich records with PDF that contains product data. The agent can also enrich and classify records that contain product data by running data quality objectives. The product experience agent applies the enrichment and classification results to a draft of the current record. You can also view a data completion report that shows the number of enriched fields and objectives applied.

CLAIRE recommendations

When you claim an approval task, you can now view the CLAIRE recommendations for data enrichment in the Insights panel. You can accept or reject those recommendations. MDM SaaS saves the accepted values to the record after your final approval.

The following image shows the Insights tab of the CLAIRE Copilot panel in the workflow inbox:

Default values

When you create a record, the business application populates default values for the fields that have default values configured. You can override the default values.

Preview functionality is supported for evaluation purposes but is unwarranted and is not supported in production environments or any environment that you plan to push to production. Informatica intends to include the preview functionality in an upcoming release for production use, but might choose not to in accordance with changing market or technical circumstances. For more information, contact Informatica Global Customer Support.

Preview lifted

Effective in the October 2026 release, the following functionality is production ready:

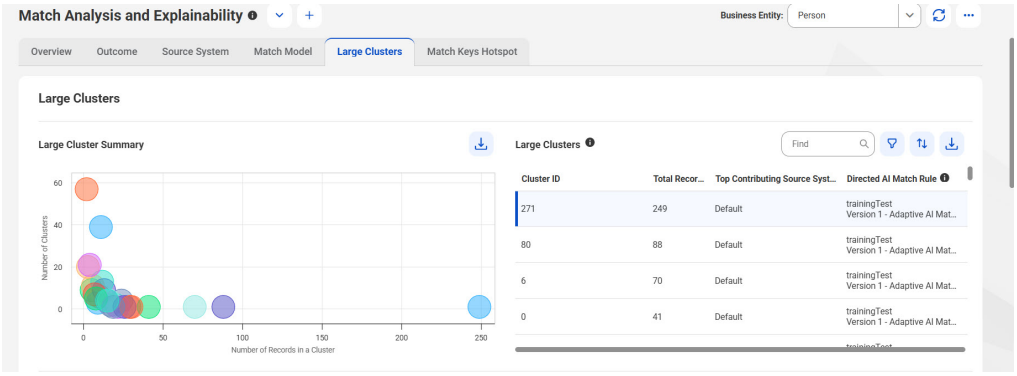

Import data

When you import records, you can now update only the fields that contain values without overwriting the other fields that have null values.

Match Analysis and Explainability dashboard

You can now use the Match Analysis and Explainability dashboard to analyze and identify large clusters of records that are formed during the match process. You can then fine-tune the match model configuration to prevent the formation of large clusters to avoid overmatching.

The following image shows the Large Clusters tab in the Match Analysis and Explainability dashboard:

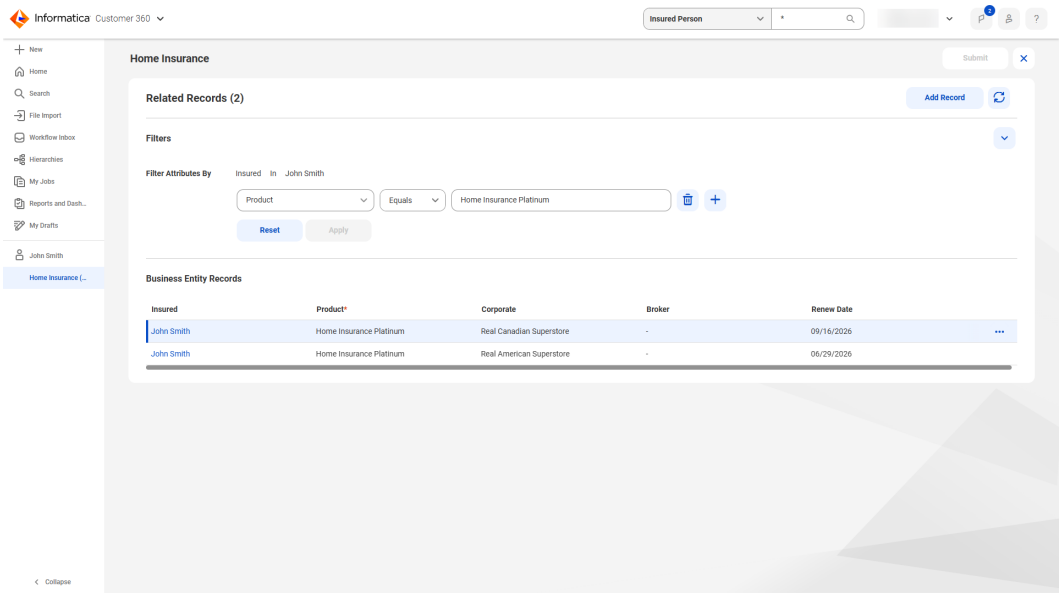

New features and enhancements

The October 2026 release includes the following new features and enhancements.

Filter related records with business entity record fields

When you manage related records that are based on business entity record fields in the related records table, you can filter the table to focus on the records that you want to view and edit.

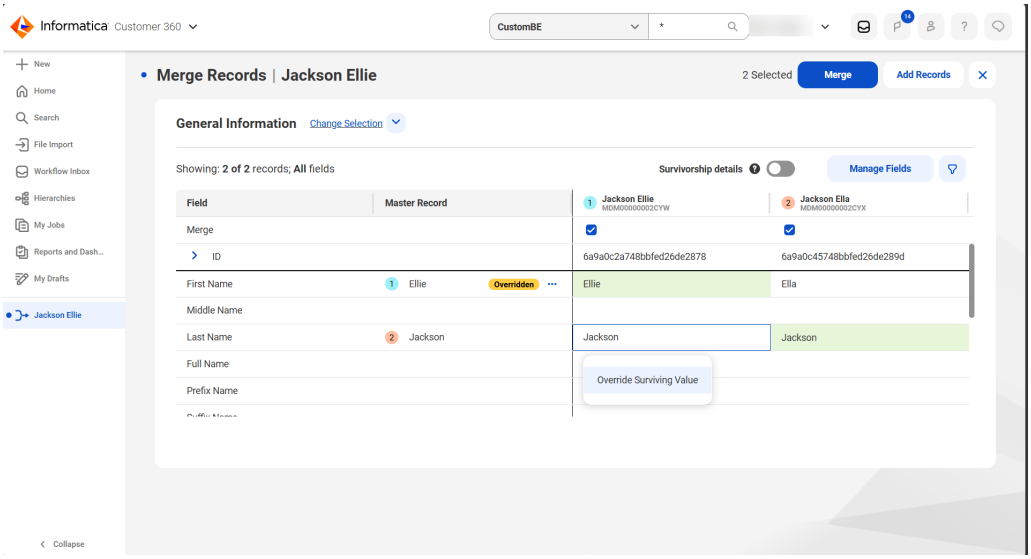

The following image shows a related records table that filters for related records with Home Insurance Platinum as the value for the Product field:

Source records and workflow inbox management experience

The Source Records page and the workflow inbox include the following capabilities for filtering records and overriding survivorship:

- When you merge records, you can override field values in both manual merge previews and workflow inbox tasks, and preview the surviving field values of the merged record before you submit or approve the merge.
  The following image shows the Override Surviving Value option in the manual merge preview:

- On the Source Records page, you can filter source records that have an overriding field value and those that match a specified field value.

Data Import

When you import records, you can update individual fields in a target record instead of replacing the entire record. The update applies only to the fields in the import file that are mapped to the target fields. Other fields remain unchanged. You can also control how the update handles empty values in mapped fields. When a mapped field is empty in the import file, you can overwrite the target value with null or leave it unchanged.

Note: This functionality is available only after you migrate your rule associations to use Enrichment and Validation Orchestrator in organizations created before the October 2025 release.

For more information about updating fields containing data, see *Import all data*.

Dynamic field definitions

When you add dynamic field definitions to a record, you can select folders to add all the fields, field groups, and subfolders they contain at once.

For more information about dynamic field definitions, see *Manage records*.

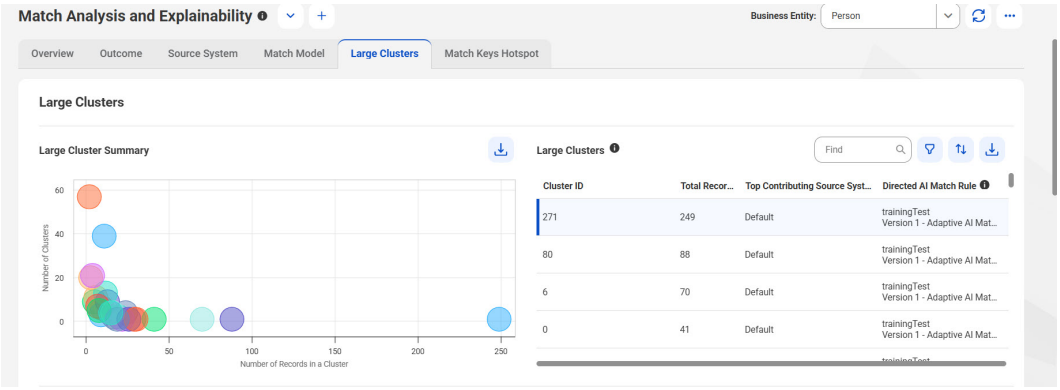

Search

To enhance search accuracy, MDM SaaS now returns more relevant results. When you search for records, you might notice changes in your search results. For example, a search for a record with the first name Benjamin also returns records with the first names Ben and Benny.

Match Analysis and Explainability dashboard

You can now use the Match Analysis and Explainability dashboard to analyze and identify large clusters of records that are formed during the match process. You can then fine-tune the match model configuration to prevent the formation of large clusters to avoid overmatching.

The following image shows the Large Clusters tab in the Match Analysis and Explainability dashboard:

For more information about the Large Clusters tab in the Match Analysis and Explainability dashboard, see *Large Clusters tab.*

Changed Behavior

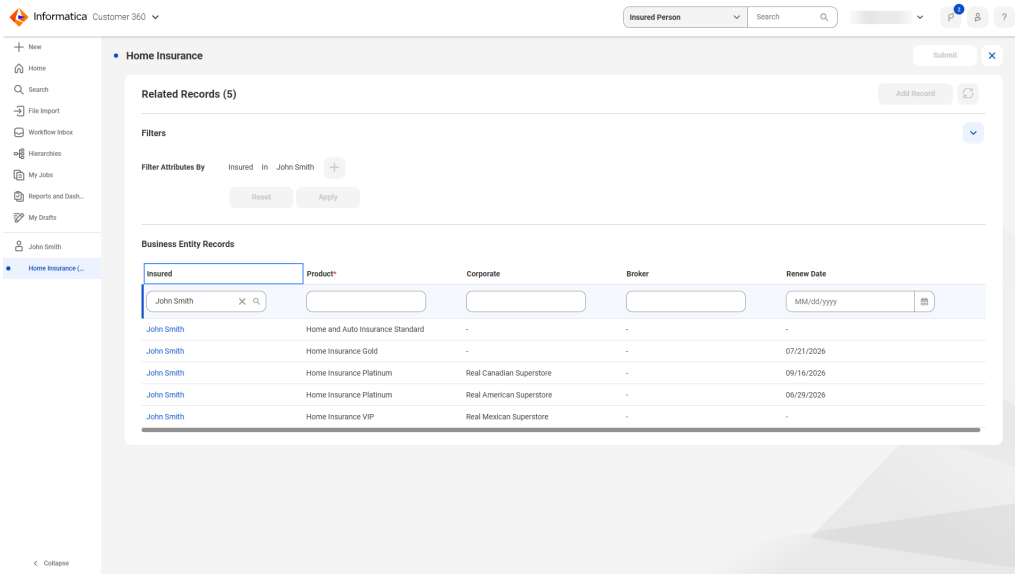

The October 2026 release includes the following changed behaviors:

Business entity record fields

When you use the related records table to create a new related record with a business entity record field, you fill in the business entity record field. Customer 360 SaaS automatically fills in that field with the record that the new related record belongs to. You can edit the field if needed.

For example, you have an Insured Person record named John Smith, and you want to add an insurance product for John Smith. The record John Smith has a related records table called Home Insurance Products, from which you can add new home insurance product records. In the table, you create a new Insurance Product record. The new Insurance Product record has an Insured field that accepts an Insured Person record. Customer 360 SaaS automatically fills in the Insured field with the record John Smith.

The following image shows the Insured field automatically filled in with John Smith on the new Home Insurance record:

Previously, you had to manually fill in the record for each business entity record field.

CLAIRE Copilot access

To access CLAIRE Copilot, you now need the CLAIRE GPT User role. If you don't have this role, contact Informatica Global Customer Support.

Previously, you could access CLAIRE Copilot without this role.

CHAPTER 2

July 2026

The July 2026 release of Customer 360 SaaS includes the following updates.

Changelog July 2026

Read the changelog to learn about significant changes to this publication for this release.

The following table describes changes in this publication:

Publication Date	Type of Change	Section Title
July 24, 2026	Deleted	Deduplicated field groups in the Important Notices topic
July 24, 2026	Added	Deduplicated field groups in the Changed Behavior topic
July 24, 2026	Added	Deprecated support in the Important Notices topic
July 10, 2026	Added	Deduplicated field groups in the Important Notices topic
July 10, 2026	Deleted	Deduplicated field groups in the Changed Behavior topic
June 11, 2026	Initial publication	

Important notices

The July 2026 release includes the following important notices:

Deprecated support

Effective in the October 2025 release, support for the classic experience of the Source Records page and merge and unmerge tasks in the workflow inbox is deprecated. Instead, use the new experience on the Source Records page and in the workflow inbox. The new experience is enabled by default. You can revert to the classic experience of the Source Records page and the workflow inbox, if needed.

Deprecated functionality is supported, but Informatica intends to drop support in a future release. Informatica requests that you transition to different functionality before the functionality is dropped.

Preview initiated

Effective in the July 2026 release, the following functionalities are available for preview:

Edit in a table

You can now select multiple records from search results and edit them in a table. You can edit up to 10,000 records in a table. After you edit records, you can save them as drafts, submit all drafts, or discard the drafts to revert to the original values.

View and manage drafts

When you edit records in a table, you can now save your changes as drafts instead of submitting them immediately. You can view and manage all your drafts on the My Drafts page. You can search for specific drafts, open them in a table for editing, or discard them.

Import data

When you import records, you can now update only fields that contain values without overwriting other fields with null values.

Preview functionality is supported for evaluation purposes but is unwarranted and is not supported in production environments or any environment that you plan to push to production. Informatica intends to include the preview functionality in an upcoming release for production use, but might choose not to in accordance with changing market or technical circumstances. For more information, contact Informatica Global Customer Support.

Changed behavior

The July 2026 release includes the following changed behaviors:

Watch the What's New video to learn about the changed behavior in the July 2026 release.

Deduplicated field groups

When you delete an entry of a deduplicated field group in a master record, the non-surviving entries don't replace the deleted entry. This change doesn't impact field group entries that you deleted before the July 2026 release.

Previously, MDM SaaS recalculated trust scores and then selected the entry with the highest trust score to replace the deleted entry in the master record.

For more information about deleting deduplicated field groups, see *Manage Records* and *Establish the Best Version of Truth.*.

CHAPTER 3

April 2026

The April 2026 release of Customer 360 SaaS includes the following updates.

Changelog April 2026

Read the changelog to learn about significant changes to this publication for this release.

The following table describes changes in this publication:

Publication Date	Type of Change	Section Title
May 13, 2026	Added	Link to the What's New video in the New features and enhancements topic
May 8, 2026	Modified	Change event details
May 8, 2026	Added	History of records in the Important notices topic
April 9, 2026	Modified	History of records in the New features and enhancements topic
April 9, 2026	Modified	Lineage of records in the New features and enhancements topic
April 9, 2026	Modified	Source records management experience in the New features and enhancements topic
April 2, 2026	Added	Exploring the lineage of records
March 26, 2026	Added	Source Records page in the Changed behavior topic
March 11, 2026	Initial publication	

Important notices

The April 2026 release includes the following important notice:

Deprecated support

Effective in the October 2025 release, support for the classic experience of the Source Records page and merge and unmerge tasks in the workflow inbox is deprecated. Instead, use the new experience on the Source Records page and in the workflow inbox. The new experience is enabled by default. You can revert to the classic experience of the Source Records page and the workflow inbox, if needed.

Deprecated functionality is supported, but Informatica intends to drop support in a future release. Informatica requests that you transition to different functionality before the functionality is dropped.

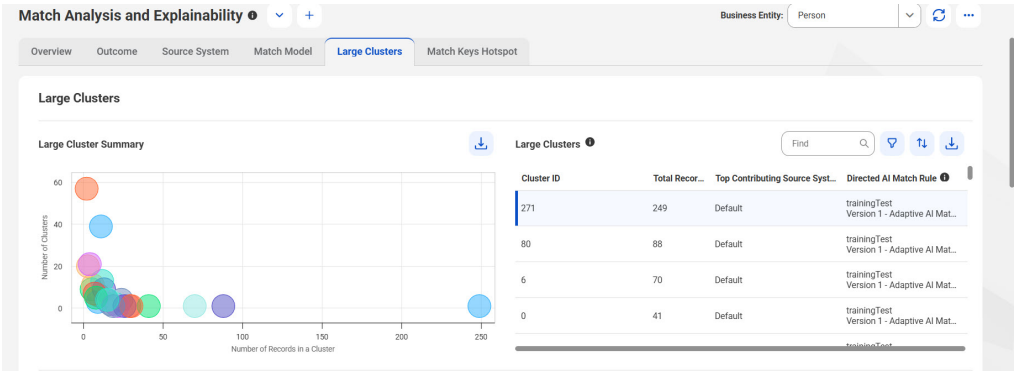

Preview initiated

Effective in the April 2026 release, the following functionalities are available for preview:

Match Analysis and Explainability dashboard

You can now use the Match Analysis and Explainability to analyze and identify large clusters of records that are formed during the match process. You can then fine-tune the match model configuration to prevent the formation of large clusters to avoid overmatching.

The following image shows the Large Clusters tab in the Match Analysis and Explainability dashboard:

Import data

When you import records, you can now update only fields that contain values without overwriting other fields with null values.

Task inbox

As a reviewer, you can now view all the review tasks that are assigned to you in the task inbox. You can add comments and resolve tasks, or assign them to relevant users or user groups. You can view the workflow status for each task through a flow chart to identify where your review fits in the workflow.

You can also view the tickets for which you're a stakeholder in the ticket manager. Tickets are automatically created when workflows are triggered, and you can view details, such as statuses of tasks and comments, in tickets.

For example, consider a workflow for a loan application process. A ticket is automatically created in the ticket manager when a loan application is received and the first task in the workflow is triggered. When reviewers complete tasks, such as credit score and affordability checks, KYC document collection, and legal compliance reviews, the milestones are recorded in the ticket. After all the tasks are completed and the loan application is approved or rejected, the ticket is closed. The ticket also displays any comments that reviewers add to tasks.

CLAIRE Copilot

You can use the product experience agent in CLAIRE Copilot to extract data from PDFs and enrich records. The agent can also enrich and classify records by running data quality objectives. After enrichment, you can view a data completion report that shows the number of enriched fields and the number of objectives applied.

History of records

When you view the history of a master record created after the October 2025 release, you can also view the history of contributing records created before the October 2025 release.

Preview functionality is supported for evaluation purposes but is unwarranted and is not supported in production environments or any environment that you plan to push to production. Informatica intends to include the preview functionality in an upcoming release for production use, but might choose not to in accordance with changing market or technical circumstances. For more information, contact Informatica Global Customer Support.

New features and enhancements

The April 2026 release includes the following new features and enhancements.

Watch the What's New video to learn about the new features and enhancements in the April 2026 release.

Source records management experience

The new experience for the Source Records page offers more capabilities for record matching and overriding survivorship, and a more organized view that highlights patch and deleted records.

You can now use the following capabilities that the new experience of the Source Records page offers:

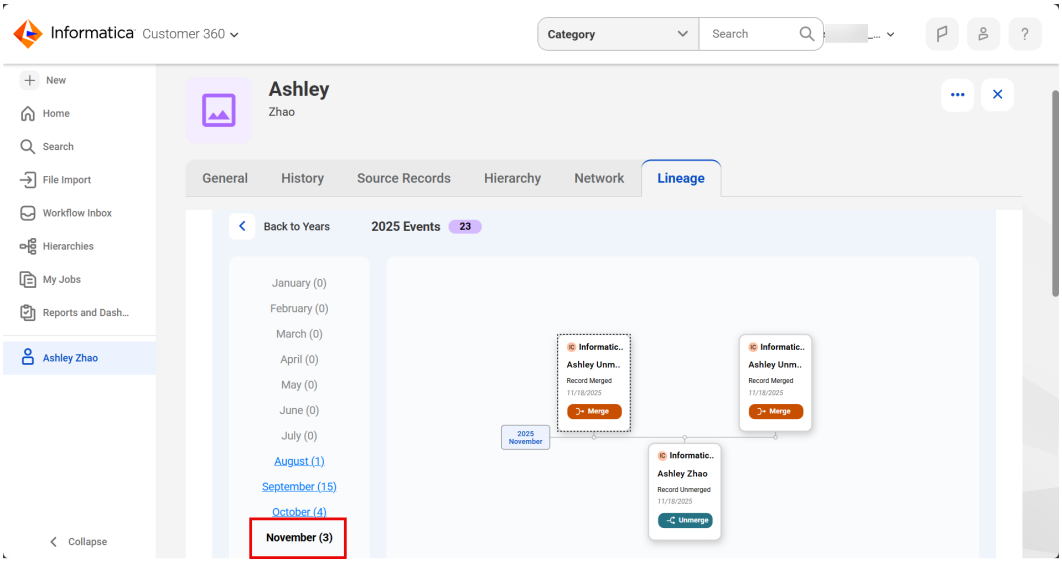

- Enable or disable records for participation in the match process.
- Explore record pairs of a source record and view details such as their match strategy.
- Expand or collapse fields in a field group for a more focused view.
- Identify patch and deleted records with visual indicators.
- Override dynamic field values.

For more information about the new experience for the Source Records page, see *Source Records page experiences*.

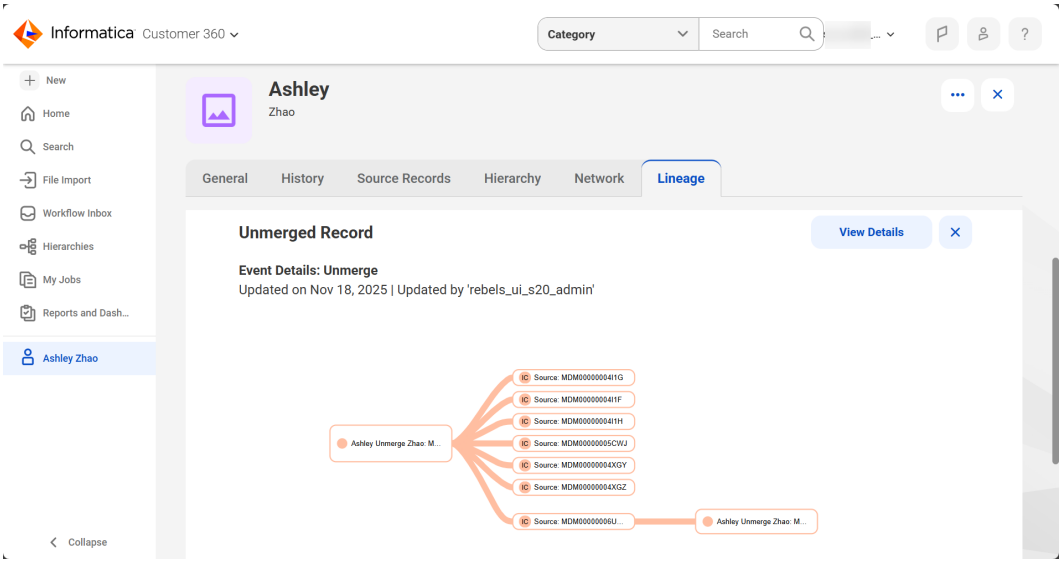

Lineage of records

You can visually explore the create, merge, and unmerge events in an interactive timeline to gain insight into how a master record evolved over time. To find events more easily, you can view events within a time period and filter events with additional criteria, such as source systems. You can also view an event summary and key details, such as timestamp and event action.

The following image shows a sample Lineage page displaying events from November 2025:

The following image shows a sample chart of an unmerge event:

For more information about lineage of records, see *Manage records*.

Rich text formatting for text fields

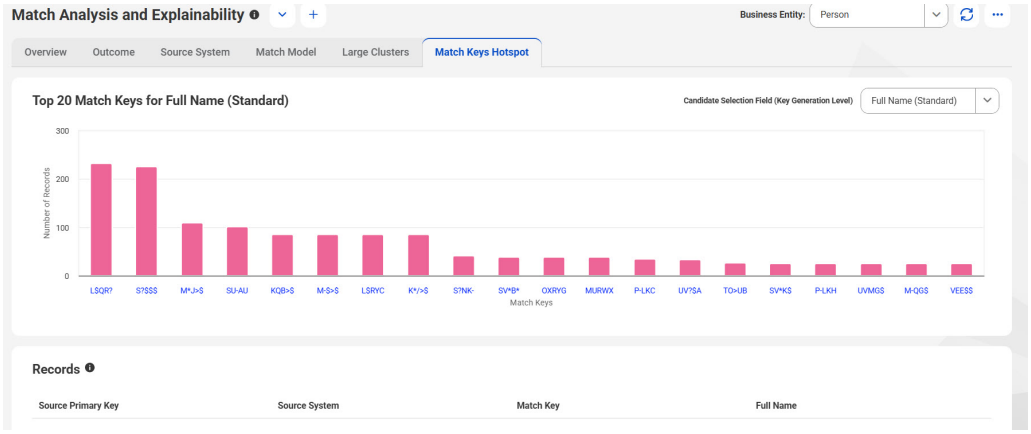

You can now use text values in rich text format to style and enhance text by applying formatting options, such as bold, italics, underline, fonts, colors, bullet points, and hyperlinks. You can enter HTML tags and attributes directly when you enter text values or use the rich text editor to format text values.

For more information about rich text formatting, see *Applying rich text formatting to text values*.

Match Analysis and Explainability dashboard

The Match Analysis and Explainability dashboard includes the following enhancements:

- You can now use the dashboard to analyze the distribution of match keys generated for match fields and to identify potential hotspots with a high concentration of match keys. You can then fine-tune the match model configuration to minimize these hotspots to avoid overmatching.
  The following image shows the Match Keys Hotspot tab in the Match Analysis and Explainability dashboard:

- You can now use the enhanced Match Model tab in the dashboard to gain clear insights into how each match field influences prediction outcomes, with contribution scores indicating support for matches or non-matches. You also have insight into the merge strategy of the Adaptive AI match model, automated or manual, based on training data. This insight makes the merge strategy used by the match process, which is based on predictions from the Adaptive AI match model, more transparent.

For more information about the Match Analysis and Explainability dashboard, see *Match Analysis and Explainability dashboard*.

Search records using dynamic field values

You can now search for records by using dynamic field values. You can also filter search results by using dynamic fields.

For more information about searching records using dynamic field values, see *Manage records*.

Dependent facets

When you select a field value as a filter, the values in other filters update dynamically to show only relevant values.

For more information about importing records, see *Manage Records*.

History of records

You can now view the history of updates for dynamic fields. When you create, update, or delete dynamic fields, the corresponding change events now appear in the record history.

For more information about viewing the history of records, see *Manage Records*.

Export search results

When you export search results, you can now select the attributes to include from a complete list of all attributes. Customer 360 SaaS creates a job to export the search results asynchronously.

When you export the search results, you can view the export job and its metrics on the job details page and then download the exported data.

For more information about exporting search results, see *Exporting search results*.

Changed Behavior

The April 2026 release includes the following changed behaviors:

Source Records page

The new experience for the Source Records page includes the following behavior changes:

- When you perform actions at the source record level such as unmerge, the Actions icon for the source records is always visible.
  Previously, the Actions icon appeared when you hovered over a source record.
- When you manage fields, you can now customize field order and visibility by default.
  Previously, the option wasn't enabled by default.
- When you navigate field groups, those with values appear before empty field groups.
  Previously, field groups appeared in the order in which they were added to a business entity.

For more information about the new experience, see *Source Records experiences*.

Source records

You can now manually merge source records that you consider as potential matches to create a master record even when these records are disabled for matching. The match and merge status of the merged source records remains unchanged even after you manually merge them.

Previously, you couldn’t merge source records that were disabled for matching.

For more information about merging records, see *Merge master records*.

File import

When you import records with field values that exceed the maximum field length, the import process rejects the records in the transform step.

Previously, when you imported records with field values that exceeded the maximum field length, the import process truncated the values to fit within the maximum field length.

For more information about importing records, see *Import and Match Data*.

Match and export data

You can now run multiple match and export jobs simultaneously.

Previously, you could run only one match and export job at a time.

For more information about matching and exporting data, see *Match and export data*.

CHAPTER 4

October 2025

The October 2025 release of Customer 360 SaaS includes the following updates.

Important notices

The October 2025 release includes the following important notice:

Deprecated support

Effective in the October 2025 release, support for the classic experience of the Source Records page and merge and unmerge tasks in the workflow inbox is deprecated. Instead, use the new experience on the Source Records page and in the workflow inbox. The new experience is enabled by default. You can revert to the classic experience of the Source Records page and the workflow inbox, if needed.

Deprecated functionality is supported, but Informatica intends to drop support in a future release. Informatica requests that you transition to different functionality before the functionality is dropped.

New features and enhancements

The October 2025 release includes the following new features and enhancements:

Watch the What's New video to learn about the new features and enhancements in the October 2025 release.

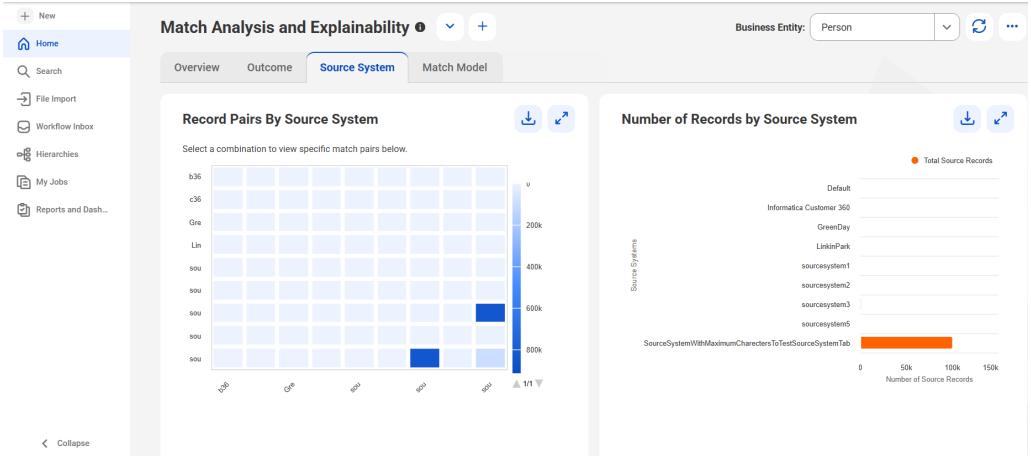

Match Analysis and Explainability dashboard

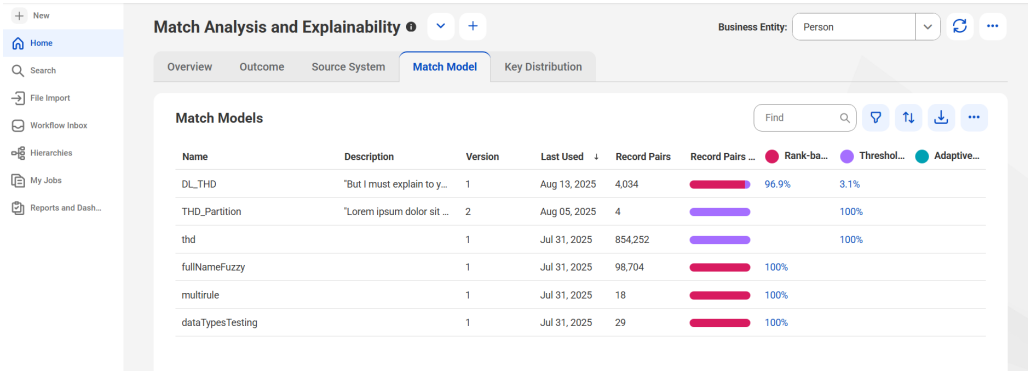

You can now use the Match Analysis and Explainability dashboard to explore record pairs based on their source systems and the match rules that matched them.

The Match Analysis and Explainability dashboard displays the following details for a business entity:

- Source System. A graphical summary of number of record pairs categorized by source systems. The summary also shows the number of source records that didn't match with any records. Additionally, you can filter record pairs by source systems and explore individual record pairs.

- Match Model. A summary of record pairs based on rank-based Directed AI match rules, threshold-based Directed AI match rules, and Adaptive AI match models. You can explore and analyze record pairs to fine-tune match model configurations.
  The following images display a sample Match Analysis and Explainability dashboard:

For more information about the Match Analysis and Explainability dashboard, see *Match analysis and explainability dashboard*.

Source records management experience

When you open the Source Records page, the new experience of the page is enabled by default to better manage source records. You can show or hide fields for a more focused view of source records. Also, you can view dynamic fields, apply more filters, and navigate field groups easily. You can revert to the classic experience of the Source Records page, if needed.

For more information about the new experience, see *Source Records experiences*.

Sort and filter field group entries

When you create, view, or edit records, you can now sort and filter field group entries based on their fields to easily access data.
For more information about sorting and filtering field group, see *Creating records* and *Editing records*.

Source records unmerge

When you unmerge source records from a master record, you can allow the source records to merge back into the same master record they were unmerged from through match and merge jobs. By default, the source records don't merge back into the same master record.

For more information about allowing unmerged source records to merge back into a master record, see *Unmerge source records*.

Match and export data

The match and export process includes the following enhancements:

- When multiple master records match external data in the CSV file, you can now choose to export record pairs that have the highest score or record pairs that are matched by the highest-ranked rule.
- You can now save field mappings with business entity fields and CSV columns that you selected to export.

For more information about matching and exporting data, see *Match and export data*.

Merge and unmerge task reviewing experience

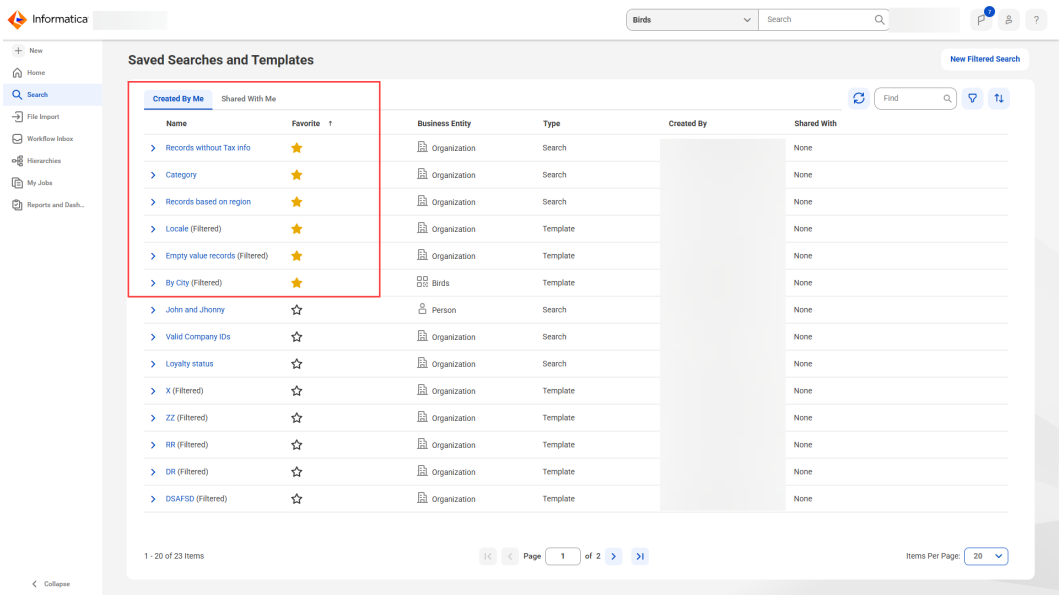

When you open the workflow inbox to review merge and unmerge tasks, the new experience of the workflow inbox is enabled by default. The new experience offers a more organized merge preview that highlights contributing source records. You can revert to the classic experience of the workflow inbox, if needed.

For more information about the new experience, see *Workflow inbox experiences*.

Saved searches and templates

You can now mark your saved searches and templates as favorites for quick and easy access. MDM SaaS moves the saved search or template that you mark as favorite to the top of the list.

The following image shows saved searches and templates that are marked as favorites on the Saved Searches and Templates page:

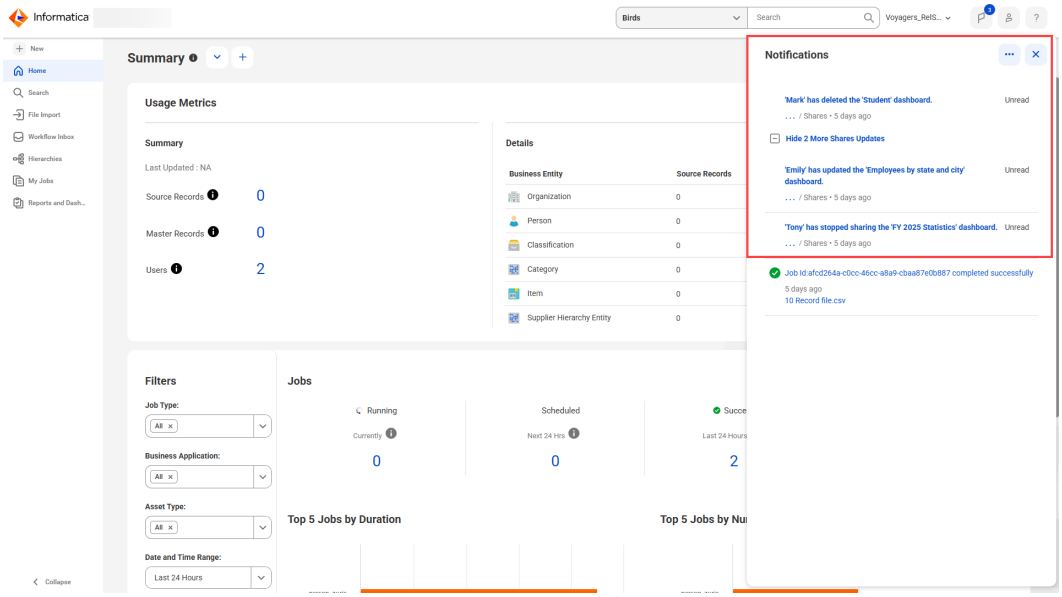

For more information about marking your saved searches and templates as favorites, see *Manage Records*.

Dashboards

You can now get notifications when users in your organization update or delete shared dashboards. Additionally, MDM SaaS sends notifications when a shared dashboard is made private. To get notifications, the shared dashboard must be added to your Home page.

The following image shows notifications on shared dashboards:

Also, you can add up to 100 custom dashboards in your organization. If your organization reaches the limit, delete an existing custom dashboard, or contact your administrator.

For more information about notifications on shared dashboards and limits on custom dashboards, see *Manage Dashboards*.

CLAIRE Copilot

You can now use CLAIRE Copilot to discover business entities and explore attributes of a business entity. You can also explore records of a specific business entity.

You can use the following sample prompts in CLAIRE Copilot:

- Show me the overview of Person business entity
- Show me all attributes in @Person business entity

  Note: Use @ to see a list of assets that you can explore. You can select the required business entity from the list of assets.
- Show all data quality rules, match rules, and survivorship rules configured in @Organization
- Find all records with the first name John and born in the US from @Person

Additionally, CLAIRE Copilot displays prompt suggestions to explore relevant details.

For more information about discovering and exploring data in CLAIRE Copilot, see *Discover assets from MDM SaaS*, *Explore metadata of assets from MDM SaaS*, and *Explore source data of assets from MDM SaaS*.

Changed behavior

The October 2025 release includes the following changed behavior.

Source Records page

The new experience for the Source Records page is more intuitive and easier to navigate. You can delete, restore, and unmerge records in a more intuitive way at the source record level.

In the classic experience, you had to select the option to delete, restore, or unmerge at the master record level, and then select the specific source records.

The new experience is enabled by default. You can revert to the classic experience of the Source Records page, if needed.

To see the complete list of changes, see *Source Records experiences*.

Special characters in source primary keys

When you ingress or import records containing special characters that aren't allowed in source primary keys of field groups, the nested field group values don't appear on the record details page.

Previously, these values appeared on the record details page.

For more information about supported special characters in source primary keys, see *Prerequisites for importing all data*.

Match Analysis and Explainability dashboard

Access to the Match Analysis and Explainability dashboard for a business entity now requires the **Match Analysis and Explainability Dashboard** privilege. If you can't access the dashboard, contact your administrator.

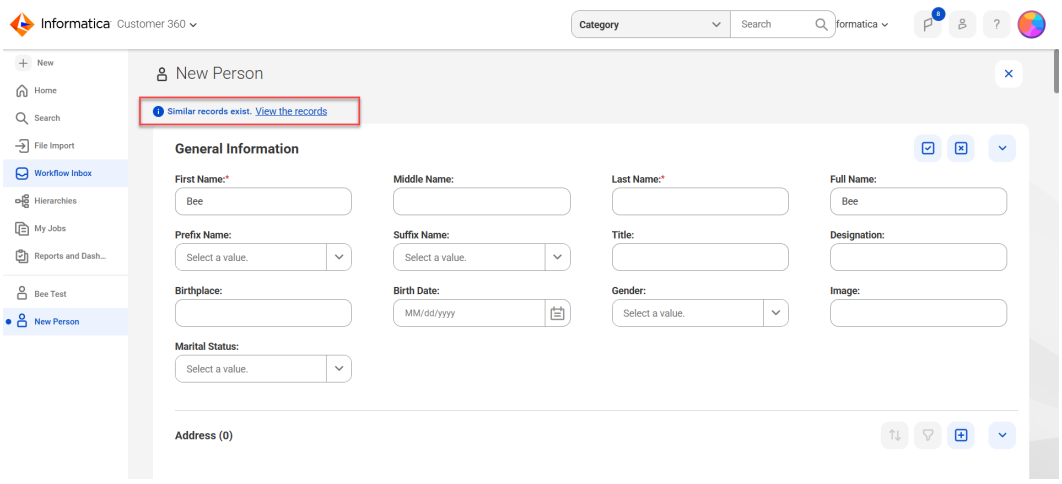

Previously, the dashboard was accessible to all users without any access restrictions.

For more information about configuring privileges for custom user roles to access the Match Analysis and Explainability dashboard, see *Match Analysis and Explainability Dashboard* in the Business 360 Console help.

Similar records

In an organization that has CLAIRE Copilot enabled, when you create a record, information about similar records appears in the create record form.

The following image shows the similar records notification in the create record form:

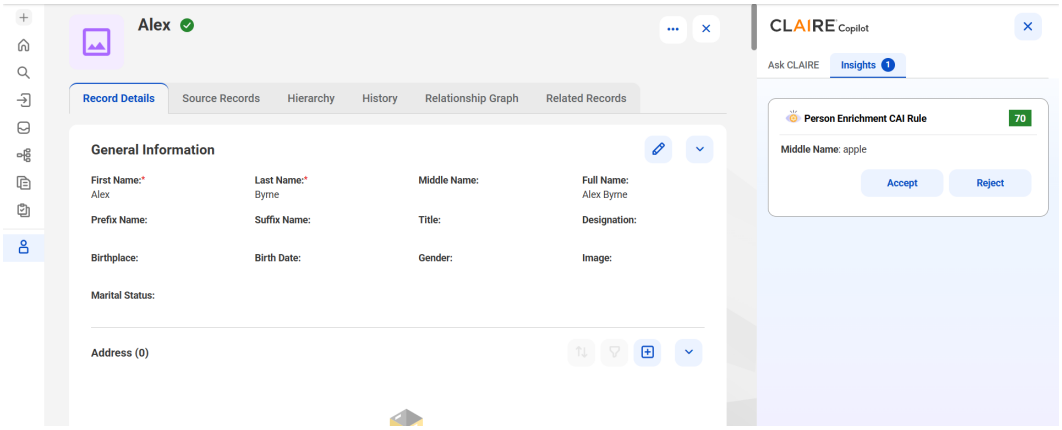

Previously, similar records information appeared in the CLAIRE panel.

Enrich records

In an organization that has CLAIRE Copilot enabled, after you create and submit a record, the CLAIRE icon is highlighted. To view enrichment cards, use the Insights tab in the CLAIRE Copilot panel.

The following image shows a sample recommendation on the Insights tab of the CLAIRE Copilot panel:

Previously, enrichment cards appeared on the Enrich Records tab of the CLAIRE panel.
