Preface

Read the *Release Notes* to learn about fixes and known limitations for MDM - Reference 360.

For information about new features and enhancements, see *What's New*.

MDM - Reference 360

Fixed issues

The tables in this section describe recent fixed issues for Reference 360. Note that some releases might not include fixes.

October 2026 fixed issues

Issue	Description
RDMNEX-21133	When you add a code value to a default or custom code list and enter 0 as the value for a required integer data type attribute, Reference 360 doesn't save the code list.
RDMNEX-21157, RDMNEX-21252	When you view a code value in a code list that contains an optional Boolean data type attribute, Reference 360 doesn't display the value for the attribute, even if you set a value.

Issue	Description
RDMNEX-21266	If your organization has a large number of reference data sets and code lists, the Reference 360 page might take longer to open. You might also experience slower load times when you open a reference data set or code list.
MDMN-167137	When you configure an advanced rule association for a code attribute and import code values into a code list, the job fails at the transform step. This issue occurs when the rule association uses default values for all input fields.

July 2026 fixed issues

Issue	Description
RDMNEX-21108	When you configure hierarchical approval workflows, the Workflow tab incorrectly displays the option to enable the workflow, which has no effect on hierarchies.
RDMNEX-20437	When you import code values that contain a colon (:), only the portion after the colon appears on the Upload File page. However, the code values appear correctly on the Map Fields page, and Reference 360 imports them correctly.
MDMN-200949	If you have the Reference 360 Administrator user role without purge privileges, you can view the purge option in Reference 360 even though you can't purge data.
RDMNEX-16624	If a code list has the `REINDEX_REQUIRED` status during code value import, the job fails in the **Index for Search** step.

April 2026 fixed issues

Issue	Description
RDMNEX-19404	When you try to delete a dictionary that's associated with a rule specification in Data Quality, Reference 360 displays an irrelevant error message.
RDMNEX-17616	When you ingress or import code lists that have data quality rule associations configured, the transform step of the job incorrectly displays 0 error records even if a code list attribute fails validation.
MDMN-174899	When you configure basic rule associations with the Replace function to replace spaces, Reference 360 doesn't replace the spaces.

October 2025 fixed issues

Issue	Description
RDMNEX-18727	If you import a reference data set with a name longer than 42 characters, the import fails because the internal ID of the default code list of the reference data set exceeds 45 characters.
RDMNEX-18704	Even after you delete a value for a field used in a basic rule association of a code list attribute, Reference 360 continues to display the value for the attribute.
RDMNEX-18657	When you hover over the name of a child code value on the Relationships tab of a hierarchical code list, the name of the parent code value appears.
RDMNEX-18608	After an approver receives an approval notification for an approval task, the workflow inbox or the notification inbox don't display any task if the user belongs to a user group with a name that contains Japanese characters.
RDMNEX-12692	When you configure an advanced rule association for an attribute and if the rule uses a single field as input and output, Reference 360 disables the attribute.

July 2025 fixed issues

Issue	Description
RDMNEX-18032	When you lock an outgoing crosswalk, the outgoing crosswalk incorrectly appears as an incoming crosswalk.
RDMNEX-17878	When you enter an invalid value for a code list attribute that has an advanced rule association configured, Reference 360 displays a validation error. After you enter a valid value and save the code list, Reference 360 displays the same validation error. This issue occurs only when other attributes also contain validation errors.
RDMNEX-17426	If a job definition contains taskflows with multiple assets, Reference 360 doesn't display all the assets until you reduce the zoom level to view them.

May 2025 fixed issues

Issue	Description
RDMNEX-17651	In an approval task, an integer field from a code list doesn't display any value in the Compare Versions section if the value is set to 0.
RDMNEX-17487	After you submit a code list for approval, the code list incorrectly appears as pending approval when other users open it.
RDMNEX-17284	When you import multiline string fields to a code list, the text in the multiline string fields overlaps with adjacent rows in the table.

Issue	Description
RDMNEX-17057	When you add an approver to the existing list of approvers for a code list, the Workflow tab displays only the newly added approver.
RDMNEX-16423	The Definition tab of a code list doesn't display the complete name of a referenced reference data set or code list if the name contains more than 20 characters.

April 2025 fixed issues

Issue	Description
RDMNEX-16856	When you add a code value to a reference data attribute in a hierarchical code list, you can select only the child code values from the referenced hierarchical code list.
RDMNEX-16709	After you disable the data quality rule association for a Code field, the Code field value continues to be optional in the user interface. You get the following incorrect message: `The Code field needs no mapping, as it will be derived through rule configuration`
RDMNEX-16617	After you export reference data sets with a code list that has a default value for an attribute and import them into another organization, the import job fails.

February 2025 fixed issues

Issue	Description
MDMN-161043	After you modify the status and effective date fields of code values, the Compare Versions section doesn't display any values in these fields.
RDMNEX-16295	When your organization has large volume of data, the **Code Value History** tab for a code list doesn't open.
RDMNEX-16079	After you run a file import job to import a CSV file for reference data set or code lists, you can't download the error report for code values and value mappings.
RDMNEX-16029	When you review the changes to a code list that contains a large number of code values, the vertical scroll bar in the Compare Versions section doesn't scroll to the correct position of the changes.
RDMNEX-15952	Users belonging to a user group that's assigned with the Reference 360 Administrator role can't run the Update approval mode configuration REST API.
RDMNEX-15946	When you enter a value in a picklist field, Reference 360 fails to retrieve relevant values because it adds a leading space to the entered value.
RDMNEX-15885	If a referenced attribute of a parent code list doesn't contain any value, Reference 360 displays the code field of the parent code list for the child code list attribute that uses the referenced attribute.
RDMNEX-12124	When a code value of a code list contains multiple spaces between two characters, Reference 360 doesn't display the additional spaces.

November 2024 fixed issues

Issue	Description
RDMNEX-15875	If the description of a code value exceeds 100 characters, hovering over it in the Compare Versions section doesn't display the complete description.
RDMNEX-10234	After an approver rejects a task, clicking the View link in the requester's notification inbox incorrectly opens the workflow inbox.

October 2024 fixed issues

Issue	Description
RDMNEX-15349	When an approver disables the **Show only changes** option in an approval task, the Compare Versions section doesn't display all the code values in a code list.
RDMNEX-15238	When you configure an advanced rule association, selecting the **Open in a new browser tab** option for a rule specification doesn't open the rule specification in a new browser tab.
RDMNEX-15192	When you use the import model version 3 REST API to import assets that might have incremental changes in target organizations, the default values of target fields aren't updated.
RDMNEX-15123	After you create a job definition with taskflows associated with a code list in Reference 360 and then delete the code list, opening the job definition from Reference 360 or Business 360 Console results in a corrupted job definition.
RDMNEX-14614	After you delete a Date type attribute along with code values in a code list, if you add another attribute to the same code list, you can't save new code value.

August 2024 fixed issues

Issue	Description
RDMNEX-14711	If you import a CSV file and change the row from which you want to import data in the File Settings section, Reference 360 incorrectly displays the column headers as 0, 1, and so on.
RDMNEX-14545	When you use the Search REST API to search for code values with specific keywords, the response includes some incorrect results.
RDMNEX-14472	When you use the Ctrl key to select multiple code values in a code list, starting from the bottom to the top, and try to update any value, you can't save the updated values.
RDMNEX-14434	After you add custom attributes to a code list, if you update any attribute or set the attributes as required, the order of the attributes changes.
RDMNEX-14274	When you use the import code values version 2 REST API, which includes mappings in the request, to import a CSV file containing a custom attribute with a space in its name, the import request fails.

Issue	Description
RDMNEX-14001	In an organization that uses the Reference Data Management Basic Edition license, when you create a code value, you can view the Status and Effective Date fields in the New Code Value dialog box even though they must not be available.
MDMN-139328	Reference 360 displays the total number of code values for any asset incorrectly.

July 2024 fixed issues

Issue	Description
RDMNEX-14706	When you create an advanced rule association, the business entity output field isn't completely visible.
RDMNEX-14366	When you copy a code value that contains a Boolean attribute set to No from a parent code value in a hierarchical code list, Reference 360 doesn't display the Boolean attribute value.
RDMNEX-14103	After you delete the default code list of a reference data set and create a code list in the reference data set, the default code list shows the deleted code list value.
RDMNEX-13838	When you move a child code value from one parent code value to another within a hierarchical code list, Reference 360 intermittently displays duplicate code values.
RDMNEX-13711	After you add or modify code values in a code list and submit your changes for approval, the Code Values History tab displays the name of the requester in the Approved By field.

May 2024 fixed issues

Issue	Description
RDMNEX-14200	After you delete the same child code value from different nodes in a hierarchical code list, the API that retrieves the history of code value hierarchies fails with the following error: `Internal RDM application error`
RDMNEX-14105	If you apply a filter to code values based on a Boolean attribute that's a required field in a code list, the filter option might not work.
RDMNEX-14092	When an approver approves or rejects a request or sends a task back, the Comment field doesn't appear as a required field for a few seconds.

April 2024 fixed issues

Issue	Description
RDMNEX-13501	When you select a reference data set from the **Explore** panel, click the **Stakeholder** tab, and then open the reference data set, the delete option doesn't appear against the stakeholders.
RDMNEX-12053	When you configure basic rule associations with the **Left Trim** or **Right Trim** functions for a code attribute in a code list, the reference data import job doesn't load code values into the code list.
RDMNEX-11657	When you save a code value after you clear the default value of a date field and update other fields, Reference 360 doesn't persist the default value in the date field.
RDMNEX-10673	After you submit a crosswalk for approval, the following issues occur: - If an approver clicks **View Draft Version**, the crosswalk opens in read-only mode instead of the draft version of the crosswalk. - If an approver clicks **Compare with Published version**, the **Compare Versions** dialog box doesn't display the changes in the crosswalk.
MDMN-91962	When you add an advanced rule association to concatenate two fields that contain more than 100 characters for the **Code** attribute, the rule output displays the first 100 characters of the fields.

February 2024 fixed issues

Issue	Description
RDMNEX-13510	When you add a value to the system reference data, the save and cancel options appear only if you hover over the specific area where the options are available.
RDMNEX-13408	You can't delete a reference data attribute if a code list that uses the reference data attribute has the Reference 360 User role as a stakeholder.
RDMNEX-12756	When you provide the default value for an input field in an advanced rule association for a code list attribute, the file import job fails at the transform step.
RDMNEX-12739	If a reference data asset is referenced in a picklist field of a business entity, you can't add or delete stakeholders to the reference data asset.
RDMNEX-12045	When you import code values with source primary keys that exceed 300 characters, the import job fails with an error.
MDMN-115457	If a user with the Reference 360 Stakeholder role locks a code list, the user can import code values and send the changes for approval even though the user doesn't have the privilege to perform an import operation.
RDMNEX-11898	After you delete a code value from a code list, if you add the same code value to the code list, the **Compare Versions** dialog box doesn't display the changed code values.
RDMNEX-11648	When you edit the existing code values after setting default values for attributes, you can view the default values for the attributes that had no values. If you save the code value without updating any other field, Reference 360 clears the default value for the attribute.

Issue	Description
RDMNEX-11489	When you configure a display attribute and set a default value for a reference data attribute, Reference 360 displays an incorrect default value.
RDMNEX-11479	When you set a default value and configure data quality rule associations for an attribute in a code list, Reference 360 ignores the default value and persists the rule statement output.
RDMNEX-12158	When a code list name exceeds 32 characters, Reference 360 doesn't render the full name of the code list and displays additional blank spaces in the **Explore** panel.
RDMNEX-12034	Reference 360 doesn't display any notification in your inbox after an import job is complete.
RDMNEX-12007	When you set the default value for an integer type attribute to `0`, Reference 360 doesn't persist the default value.
RDMNEX-10643	An idle Reference 360 session doesn't timeout even after the session idle timeout period.
MDMN-115457	A user with the Reference 360 stakeholder role can lock the code list and import code values into the code list even though the user doesn't have the privilege to import.

January 2024 fixed issues

Issue	Description
RDMNEX-11181	When you refresh the **Explore** panel, Reference 360 might display code lists that you don't have access to.

December 2023 fixed issues

Issue	Description
RDMNEX-11112	When you add or import code values, if a decimal data type attribute contains scale value greater than or equal to 10, Reference 360 displays the value in its exponential format.
MDMN-99204	When you try to import related code values into a hierarchy, if the input file doesn't contain the source primary key details for the relationships, a preview error appears.

November 2023 fixed issues

Issue	Description
MDMN-120285	When you add a basic rule association without entering a value for the required Name field, Reference 360 saves the rule association instead of displaying an error.
RDMNEX-11073, RDMNEX-11425	When you edit a code value, you can't clear the selected value for the reference data type attributes.

October 2023 fixed issues

Issue	Description
RDMNEX-11206	When you create a child code value in a hierarchical code list by copying the values from the parent code value, the reference data type attribute doesn't display any value.
RDMNEX-11071	After you set dependency for a reference data attribute, if you modify the selected reference data set and code list, Reference 360 doesn't reset the value in the **Dependent On** field.
RDMNEX-11014	When you try to change the data type of the code attribute of a reference data set from string to integer, an internal error occurs.

September 2023 fixed issues

Issue	Description
RDMNEX-11243	On the **Summary** tab of a code value, an integer type attribute with the value 0 is displayed as a null value.
RDMNEX-11081	Reference 360 displays advanced rule associations of code list attributes even though the rule specifications are deleted from Cloud Data Quality. When you export code lists that contain the attributes, the export fails.

Known issues

The tables in this section describe known issues for Reference 360. Not all monthly releases include known issues.

October 2026 known issues

Issue	Description
RDMNEX-22010	After you save a code value, the Summary tab on the right pane briefly shows the attribute details, then clears and stays empty. You can no longer view the saved code value information.

April 2026 known issues

Issue	Description
RDMNEX-20589	When dictionaries have code list attributes or value mappings with names exceeding 64 characters, Reference 360 fails to synchronize data in the dictionaries.
MDMN-197958	When you purge code values of a code list used in a draft version of a hierarchy, MDM SaaS incorrectly deletes all relationships in the draft hierarchy and discards the draft.

Issue	Description
MDMN-197897	When you purge code values in a code list in a draft or pending approval state, MDM SaaS retains the workflow tasks in the inbox instead of deleting them.
MDMN-196432	If relationships in a code list or hierarchy are in draft state, purging code values doesn't delete the relationship history.

July 2025 known issues

Issue	Description
MDMN-139062	When you export hierarchical code lists, Reference 360 includes all fields except ParentId.

February 2025 known issues

Issue	Description
RDMNEX-17262	After you export reference data sets with code list attributes that contain default values and rule associations and then import them into another organization, the import job fails. Workaround: Delete the default values for the code list attributes and then import the assets. After you import the assets, you can add the default values again.

November 2024 known issues

Issue	Description
RDMNEX-15829	When you import data from a CSV file using a REST API or the user interface, Reference 360 imports code values with special characters in the business ID field instead of rejecting them.
RDMNEX-15533	When you delete a code value from a draft code list and then publish the code list, the audit trail and the code list history APIs retrieve the change events.

July 2024 known issues

Issue	Description
RDMNEX-15102	If you configure data quality rule associations to generate a Code attribute within a code list and create a code value using the codelist REST API, the REST API ignores the mandatory Code input field. If you try to create multiple code values with the same set of input values, Reference 360 doesn't display an error.
RDMNEX-14452	When you use a REST API to create a code value, levels of the hierarchical code list are not be honored.

February 2024 known issues

Issue	Description
RDMNEX-12688	Reference 360 doesn't run the basic and advanced rule associations with transformation functions on the default value that you set for the code list attributes.

October 2023 known issues

Issue	Description
RDMNEX-11926	When you define the scale value greater than or equal to the default precision value for a decimal data type attribute, Reference 360 doesn't display any error message.
MDMN-120973	After you change the license of an organization from full license to Reference Data Management Basic Edition license, if you create a mapping in Cloud Data Integration, you can view hierarchies of the organization with full license.

MDM - Reference 360 Extension

Fixed issues

There are no fixed issues in this release of Reference 360 extensions. Not all monthly releases include fixed issues.

Known issues

There are no known issues in this release of Reference 360 extensions. Not all monthly releases include known issues.

Informatica Global Customer Support

You can contact a Global Support Center through the Informatica Network or by telephone.

To find online support resources on the Informatica Network, click **Contact Support** in the IDMC Help menu to go to the **Cloud Support** page. The **Cloud Support** page includes system status information and community discussions. Log in to Informatica Network and click **Need Help** to find additional resources and to contact Informatica Global Customer Support through email.

The telephone numbers for Informatica Global Customer Support are available from the Informatica web site at https://www.informatica.com/services-and-training/support-services/contact-us.html.
