Preface

Read *What's New* to learn about new features, enhancements, and behavior changes in MDM - Reference 360 for the current release.

For information about fixes and known limitations, see the *Release Notes*.

Informatica Resources

Informatica provides you with a range of product resources through the Informatica Network and other online portals. Use the resources to get the most from your Informatica products and solutions and to learn from other Informatica users and subject matter experts.

Informatica Documentation

Use the Informatica Documentation Portal to explore an extensive library of documentation for current and recent product releases. To explore the Documentation Portal, visit https://docs.informatica.com.

If you have questions, comments, or ideas about the product documentation, contact the Informatica Documentation team at infa_documentation@informatica.com.

IDMC web site

You can access the Informatica® Intelligent Data Management Cloud™ (IDMC) web site at http://www.informatica.com/cloud.

Intelligent Data Management Cloud Communities

Use the IDMC Community to discuss and resolve technical issues. You can also find technical tips, documentation updates, and answers to frequently asked questions.

To access the IDMC Community, see Master Data Management SaaS Community.

Developers can learn more and share tips at the Cloud Developer community:

https://network.informatica.com/community/informatica-network/products/cloud-integration/cloud-developers

IDMC Marketplace

Visit the Informatica Marketplace to try and buy Data Integration Connectors, templates, and mapplets:

https://marketplace.informatica.com/

Informatica Knowledge Base

Use the Informatica Knowledge Base to find product resources such as how-to articles, best practices, video tutorials, and answers to frequently asked questions.

To search the Knowledge Base, visit https://search.informatica.com. If you have questions, comments, or ideas about the Knowledge Base, contact the Informatica Knowledge Base team at KB_Feedback@informatica.com.

IDMC Trust Center

The IDMC Trust Center provides information about Informatica security, compliance, and privacy practices.

You can access the trust center at https://trust.informatica.com/.

Informatica Global Customer Support

You can contact a Global Support Center through the Informatica Network or by telephone.

To find online support resources on the Informatica Network, click **Contact Support** in the IDMC Help menu to go to the **Cloud Support** page. The **Cloud Support** page includes system status information and community discussions. Log in to Informatica Network and click **Need Help** to find additional resources and to contact Informatica Global Customer Support through email.

The telephone numbers for Informatica Global Customer Support are available from the Informatica web site at https://www.informatica.com/services-and-training/support-services/contact-us.html.

CHAPTER 1

October 2026

The October 2026 release of MDM - Reference 360 includes the following updates.

Changelog October 2026

Read the changelog to learn about significant changes to this publication for this release.

The following table describes changes in this publication:

Publication Date	Type of Change	Section Title
September 25, 2026	Modified	"Important notices and upcoming changes" on page 6
September 10, 2026	Initial publication	

Important notices and upcoming changes

The October 2026 release includes the following important notices:

Preview initiated

Effective in the October 2026 release, the following functionalities are available for preview:

Configure privileges for custom user roles to access Reference 360 assets

In Business 360 Console, you can configure privileges for custom user roles to control access to reference data assets, attributes, code values, and workflows.

For more information about configuring privileges for custom user roles, see *Getting started with Reference 360*.

Multilingual reference data assets

You can now manage reference data set and code list in multiple languages in Reference 360. Use the Localization Languages code list to define the languages for your organization and set a default language. You can configure the string attributes of a reference data set or code list to be multilingual and then enter attribute values in each configured language. You can view the multilingual values in each preferred language and use them as lookup values in business applications. If a code list already has

code values, export the code values before you configure its attributes as multilingual. After you configure the attribute as multilingual, you can import the code values back in.

Export and import model version 3 REST APIs

The export file version in the export and import model version 3 REST APIs is updated to `4.1` to reflect the addition of multilingual reference data.

For more information about the export and import model version 3 REST APIs, see *Reference 360 REST API*.

Preview functionality is supported for evaluation purposes but is unwarranted and is not supported in production environments or any environment that you plan to push to production. Informatica intends to include the preview functionality in an upcoming release for production use, but might choose not to in accordance with changing market or technical circumstances. For more information, contact Informatica Global Customer Support.

CHAPTER 2

July 2026

The July 2026 release of MDM - Reference 360 includes the following updates.

Changelog July 2026

Read the changelog to learn about significant changes to this publication for this release.

The following table describes changes in this publication:

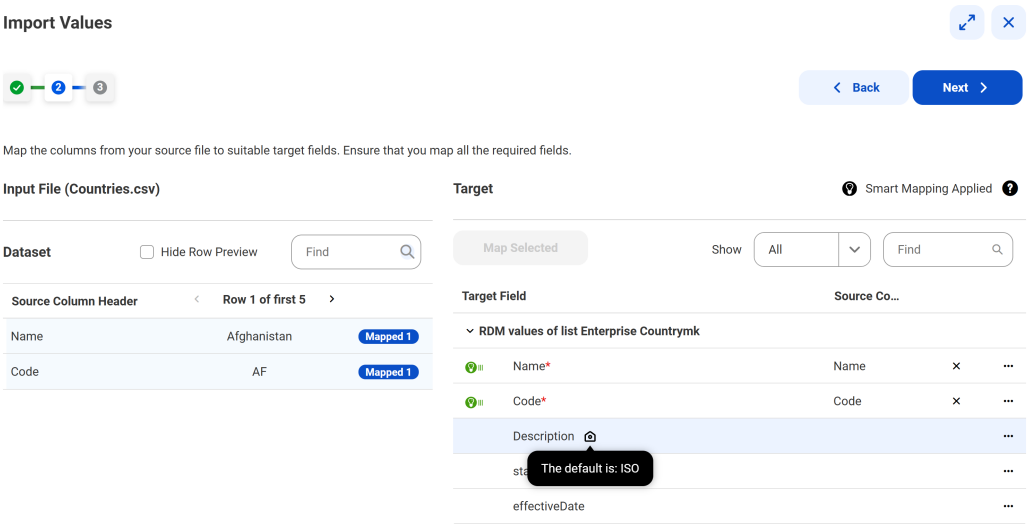

Publication Date	Type of Change	Section Title
June 23, 2026	Added	"Default values for target field attributes" on page 8
June 11, 2026	Initial publication	

New features and enhancements

The July 2026 release includes the following new features and enhancements.

Default values for target field attributes

When you map fields to import data, you can now view the default values configured for target fields. This helps you decide whether to map a source value or use the default.

For more information about mapping fields to import data, see *Import data*.

REST API

The Reference 360 REST API includes the following enhanced resources:

codelists version 1

Use the codelists version 1 REST API to synchronize Data Quality dictionaries with code values of a code list based on its internal ID or alias.

For more information about the codelists version 1 REST API, see *Reference 360 REST API*.

crosswalks version 1

Use the crosswalks version 1 REST API to synchronize a Data Quality dictionary with value mappings of a crosswalk based on its internal ID or alias.

For more information about the crosswalks version 1 REST API, see *Reference 360 REST API*.

Changed behavior

The July 2026 release includes the following changed behavior.

Reference data import and export jobs

You can now view custom descriptions for reference data import and export jobs. Use context-specific descriptions to improve job identification and management.

Previously, the jobs displayed static, default descriptions that you couldn't modify.

CHAPTER 3

April 2026

The April 2026 release of MDM - Reference 360 includes the following updates.

Changelog April 2026

Read the changelog to learn about significant changes to this publication for this release.

The following table describes changes in this publication:

Publication Date	Type of Change	Section Title
April 24, 2026	Added	"REST API" on page 11 in the Changed behavior topic
April 16, 2026	Added	Link to the What's New video in the New features and enhancements topic
March 11, 2026	Initial publication	

Important notices

The April 2026 release includes the following important notice.

Dropped support

Effective in the April 2026 release, Informatica dropped support for the export and import model versions 1 and 2 REST APIs. You can use the export and import model version 3 APIs to export and import assets from source to target organizations.

New features and enhancements

The April 2026 release includes the following new features and enhancements.

Watch the What's New video to learn about the new features and enhancements in the April 2026 release.

Purge code values

In Business 360 Console, you can now purge code values of code lists along with their relationships and historical data. You can purge code values of custom code lists that aren't picklist values of business entities in business applications, such as Customer 360 SaaS.

For more information about purging code values, see *Manage code values*.

Changed behavior

The April 2026 release includes the following changed behaviors.

Export code values in hierarchies

After you filter the code values in a hierarchy and export them, the exported data includes the complete hierarchy.

Previously, the exported data included only the filtered nodes with their root nodes.

Filter code values

Reference 360 now displays only the attributes that you selected in the column settings as filters.

Previously, Reference 360 displayed all the attributes as filters even if you hadn't selected some of the attributes in the column settings.

REST API

The Reference 360 REST API includes the following enhanced resource:

import

When you use the import version 1, 2, or 3 REST API to import code values into a code list, you can now use the following additional date formats:

- dd-MM-yyyy
- dd-MMM-yyyy
- dd/MM/yyyy
- yyyy/MM/dd

The DE date format for dd.mm.yyyy is no longer supported.

CHAPTER 4

October 2025

The October 2025 release of MDM - Reference 360 includes the following updates.

Important notices

The October 2025 release includes the following important notice.

Deprecated support

Effective in the December 2022 release, the export and import model version 1 REST APIs are deprecated. Effective in the February 2023 release, the export and import model version 2 REST APIs are deprecated. Informatica intends to drop support for these APIs in a future release.

You can use the export and import model version 3 APIs to export and import assets from source to target organizations.

New features and enhancements

The October 2025 release includes the following new features and enhancements.

Watch the What's New video to learn about the new features and enhancements in the October 2025 release.

Dictionaries for Data Quality

Dictionaries are Data Quality assets that are used to standardize and validate data values.

In Reference 360, you can now create dictionaries for Data Quality based on attributes of code lists or value mappings of crosswalks. You can access these dictionaries in Data Quality as read-only assets. Creating dictionaries in Reference 360 eliminates duplication of reference data in Data Quality and ensures that Reference 360 serves as the single, trusted source of standardized reference data for dictionaries.

For more information about managing dictionaries in code lists, see *Manage code lists*.

For more information about managing dictionaries in crosswalks, see *Manage crosswalks*.

Basic rule associations

You can now configure basic rule associations to run even when you don’t provide values for inputs fields.

For more information about configuring basic rule associations, see *Manage attributes.*

Date fields

Date values of display attributes in code lists now appear in the format that the browser locale uses.

REST API

The Reference 360 REST API includes the following enhanced resource:

Export and import model version 3 REST APIs

The version of the export file in the export and import model version 3 REST APIs is updated to `4.0` because the export and import model version 3 REST APIs now include Data Quality dictionaries.

For more information about the export and import model version 3 REST APIs, see *Reference 360 REST API*.

Changed behavior

The October 2025 release includes the following changed behaviors.

Advanced rule associations

When you add or edit a code value, you can now update values for attributes that are set as output fields of advanced rule associations. If an advanced rule association doesn't populate values for an output field, you can manually add values to the output field. When you save the code value, Reference 360 runs the advanced rule associations and overwrites the values for the attributes based on the input field values that you enter.

For example, you use a rule specification with a condition to copy the input field value to the output field if the input field starts with `1`, otherwise leave the output field blank. If the input field value doesn't start with `1`, you can update the values in the output field based on the input field values that you enter.

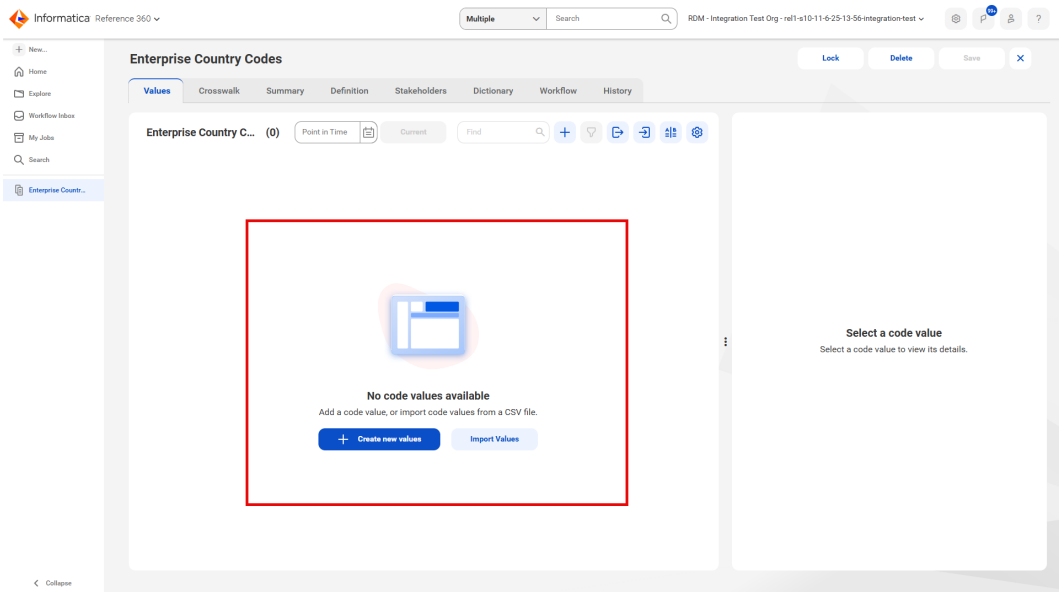

Previously, the attributes that were set as output fields of advanced rule associations appeared as read-only fields.

Enhanced visual experience for pages with no data

Reference 360 has an enhanced visual experience for pages with no data.

For example, the **Values** tab of a code list with no code values now includes an illustration with a message that guides you to create new code values or import code values.

The following image displays the **Values** tab of a code list with no code values:

Previously, the **Values** tab of a code list had no illustrations.
