Read the *Release Notes* to learn about fixes and known limitations for Supplier 360 SaaS. For information about new features and enhancements, see *What's New*.

## Fixed issues

The tables in this section describe recent fixed issues for MDM - Supplier 360 SaaS. Note that some releases might not include fixes.

### October 2026 fixed issues

| Issue | Description |
|---|---|
| MDMN-219435 | After you apply changes to a section, a picklist field doesn't display the enriched value added by a rule association. |
| MDMN-218814 | When you open the Source System tab of the Match Analysis and Explainability dashboard, the dashboard might not display any data for some business entities. |
| MDMN-211788 | After you apply changes to a section, an error message continues to appear even though you corrected a field value in a field group that failed validation. This issue affects only the second and subsequent field group entries, not the first. |
| MDMN-209793 | The new experience of the workflow inbox doesn't load a merge task that includes a large number of records. |
| MDMN-208394 | On the Match Analysis and Explainability dashboard, the Large Clusters tab fails to display any clusters. This issue occurs when one of the match models used to generate those clusters is later deleted. |
| MDMN-206882 | When you import a large CSV file that contains field values enclosed in double quotes with embedded commas, such as `"1,100 円"`, the preview fails with an internal server error. |
| MDMN-200836 | When you view error messages on the search results page in a browser set to German, the messages appear in English instead of German. On the record page, error messages appear correctly in German. |
| MDMN-174421 | When you import a CSV file with multibyte characters in its name, the file name appears garbled in the notifications pane. For example, MDM SaaS displays the file name appears as `????????.csv`. |

| Issue | Description |
|---|---|
| MDMN-210460 | When you enter an exponential value such as 12e or 12e670 in an integer or decimal field and apply the section, no validation error appears. In an integer field, the value disappears. In a decimal field, the section accepts the value, but an incorrect value appears after you submit the record. |
| MDMN-210505 | If your user role has read and update permissions but not create permission on a relationship, you can't edit the relationship attributes in the related records table. |
| MDMN-215311 | When you set the browser locale to Japanese and filter a date field with the equals operator, the search returns all active records instead of the matching records. |
| MDMN-217026 | When you create or edit a record and click anywhere around the check box label, you might unintentionally select or clear the check box, causing unexpected data changes. |
| MDMN-219243 | When you view history event details for a record, the History Details panel displays an error instead of the event changes. This issue occurs when the record has a picklist field with an empty code value. |
| MDMN-220181 | When you enter data rapidly in a decimal field on the Record Details page of a business entity and press Tab, a digit might be dropped from the field value. For example, if you enter 1234, the field might contain 124 or 134. |

## July 2026 fixed issues

| Issue | Description |
|---|---|
| MDMN-208394 | On the Match Analysis and Explainability dashboard, the Large Clusters tab fails to display any clusters. This issue occurs when one of the match models used to generate those clusters is later deleted. |
| MDMN-206658<br>MDMN-206686 | When you select a long picklist value in a field group with more than 10 fields, the value overlaps adjacent fields and hides the Cancel button, preventing deletion. This issue occurs when the field group is displayed in a table layout. |
| MDMN-204633 | When you edit root fields of a source record, the source record incorrectly survives, and field group values from this source record appear in the master record. |
| MDMN-196238 | When you navigate to a dynamic field group of a record, the dynamic field group entries might not appear.<br>Workaround: To view dynamic field group entries, open the record details page of any record of the same business entity to which the record belongs, and try again. |
| MDMN-194820 | When you open an approval task for a record that doesn't contain field group entries, an error message appears in the field group section instead of an empty state message. |
| MDMN-194439 | When you search for records and sort the search results by business IDs, the search results aren't sorted by the business IDs. |
| MDMN-184949 | In the new experience of the Source Records page, when you apply filters that return no records and then try to view record pairs, the record pairs don't load. |
| MDMN-177940 | When you search for records, CLAIRE recommendations don't display similar records if picklist values in the records contain parenthesis. |

| Issue | Description |
|---|---|
| MDMN-164984 | After you sort search results and then change the search criteria, the sort order is reset. |
| MDMN-143230 | After you edit an address of a record on the Workflow Inbox page and save the record, the record doesn't display the updated address. |

## April 2026 fixed issues

| Issue | Description |
|---|---|
| MDMN-189950 | When you filter field group entries on the record details page, if a field name exceeds 200 characters, the filter list expands beyond the screen layout to fit the name. This issue prevents you from viewing or selecting other fields. |
| MDMN-187559 | On the History page of a record, a few system field names such as Created by, Added by, Updated by, and Deleted by, aren’t translated correctly to Japanese. |
| MDMN-187134 | When you use the new experience of the Source Records page, you can't enable or disable the participation of source records in the match process.<br>Workaround: Use the classic experience of the Source Records page and select the option to enable or disable matching for source records. |
| MDMN-183682 | When you open a business application, the **Home** page loads indefinitely. This issue occurs even if your organization doesn't contain any dashboards. |
| MDMN-136693 | When you add or edit a field value and save the record, the field reverts to its previous value instead of retaining the new value. |

## October 2025 fixed issues

| Issue | Description |
|---|---|
| MDMN-181327 | When you export the details of Directed AI match rules from the Match Analysis and Explainability dashboard to a CSV file, the exported data displays the rule description in multiple columns. This issue occurs when the rules contain lengthy descriptions. |
| MDMN-178905 | When you view and close the details of a record pair in the Match Analysis and Explainability dashboard, you can’t view the details of that pair again immediately. The record pair details appear only if you view the details of other pairs. |
| MDMN-175068 | When you set the browser locale to English (Canada) and add a date in the YYYY-MM-DD format to a date field as a filter value, the filter shows an incorrect date. |
| MDMN-168176 | After you select a value for a dependent picklist in a record, the CLAIRE panel doesn't display similar records even if records with the same dependent picklist values exist. |
| MDMN-155743 | If fields within a nested field group contain validation errors, the validation messages don't appear at the record level on the page. |

## July 2025 fixed issues

| Issue | Description |
|---|---|
| MDMN-175203 | In the Related Records section, the field names of records are not translated. |
| MDMN-174260 | When you hover over the Pending label in a record with pending changes, the hyperlink to navigate to open the approval task isn't visible. |
| MDMN-173773 | When you use lengthy keywords to search for records, the search text appears in multiple lines. If the text overlaps the search results, you can't select the records that appear below the search text. |
| MDMN-171356 | When a master record contains more than 1000 source records, the Source Records page displays an incorrect count of source records. |
| MDMN-169053 | After you match and import selected data, the match output report that you download doesn’t include all mapped fields. |
| MDMN-167480 | If a business entity associated with a business entity record field contains a large number of records, you can't edit records in the Related Records section. |
| MDMN-167062 | After you merge a record with another record that had a relationship with a deleted record, the relationship graph incorrectly shows the deleted relationship as active. |
| MDMN-164647 | If a generate merge tasks job runs after matched records are reset, merge tasks are generated for records that aren't matches. |

## May 2025 fixed issues

| Issue | Description |
|---|---|
| MDMN-168378 | When you use an asterisk (*) character with a string to search for values in a picklist dialog box, multiple copies of an error message appear. |
| MDMN-168369 | When you scroll down in a picklist dialog box to select a value and the network is disconnected, multiple copies of an error message appear. |
| MDMN-166141 | When you search for records based on picklist field values that contain special characters, the filtered search doesn't return any search results. |
| MDMN-166140 | When you filter search results based on a picklist field and try to view additional picklist values, a business application incorrectly displays duplicate values and their number of occurrences. |
| MDMN-165394 | When you run a filtered search with a date, the applied filters display an incorrect date. However, the search results display the selected date. |
| MDMN-156264 | When you filter search results based on a picklist field value and save the search, a business application doesn't save the selected picklist value in the saved search. |

| Issue | Description |
|---|---|
| MDMN-139599 | After you approve a merge task, if you open another merge task that's related to a record in the first merge task, an error message appears. |
| MDMN-139056 | To update field values in nested field group entries, you might select **Update record sections** as the import type. If you don't map the operation type field for the root field, the file import job updates the field values. However, instead of the exact count of the input rows, the job displays the count as `0`. |

## April 2025 fixed issues

| Issue | Description |
|---|---|
| MDMN-163060 | When you set the browser locale to en_AU, field group entries on the record details page don't use the date format of the browser locale. |
| MDMN-159791 | If your organization has more than 50 business entities, the Reports and Dashboards page fails to load and displays the following message:<br>`Something went wrong when we tried to render this page` |
| MDMN-159581 | You can save changes made to a record in the workflow inbox even though you didn’t apply the changes. The issue occurs when you update fields on different tabs. |
| MDMN-159296 | When you filter records based on blank values for a field within a nested field group, the search results are filtered incorrectly. This issue occurs when the internal ID of any field in a field group entry ends with `id`. |
| MDMN-159165 | When you filter the history feed of a record based on a custom date range for the first time in your session, the Custom Date Range dialog box closes abruptly after it appears. |
| MDMN-158097 | When you cancel the changes to a widget of a report on the record details page, the changes aren't canceled. |
| MDMN-157415 | If a wildcard search fails to retrieve data, an error message appears on the page for less than 10 seconds. |
| MDMN-154342 | When you map fields during file import and specify an existing mapping name, you can't save the mapping. |
| MDMN-152561 | When you select a chart that's incompatible with the current template, the chart doesn't render correctly on the report view page. |

## February 2025 fixed issues

| Issue | Description |
|---|---|
| MDMN-164745 | In a related records table that displays records related through a business entity record field, when you submit updates to relationship attributes that are of the integer or double data type, the updates fail with an error. |
| MDMN-159173 | After you create a chart, you can't customize the chart settings, such as color, title, and label of the chart. |

| Issue | Description |
|---|---|
| MDMN-158543 | You can't view the task details on the record details page for records that are in the pending state. |
| MDMN-157551 | When you apply filters in the **Filters** panel of the search results page, Supplier 360 SaaS incorrectly displays codes instead of names for the picklist fields. |
| MDMN-156917 | If tasks in the workflow inbox are associated with records that were permanently deleted, the workflow inbox fails to open. |
| MDMN-156607 | If a match model includes a custom field prefixed with its business entity name and you use the match model to match and export data, the match process doesn't return match results. |
| MDMN-156271 | If a record contains a field without any value and you don't have permission to delete the field value, the following error appears even when you try to edit another field of the record:<br>`You require permission to delete data.` |
| MDMN-155839 | When you select a filter value after clicking **View More** for a field and then save the search, the search results don't match the filter value after you run the saved search. |
| MDMN-155194 | When you use the filtered search to search for records with a specific value in a picklist field, Supplier 360 SaaS doesn't return records that exactly match the specified value but returns records with similar values.<br>This issue occurs when the picklist value contains special characters. |
| MDMN-134247 | The users with approval privileges can view the system details of records and claim, approve, reject, send back, and release a task even though they don't have access to the records. |

## November 2024 fixed issues

| Issue | Description |
|---|---|
| MDMN-154874 | In a filtered search, if a field name exceeds 25 characters, additional spaces appear between the field name and the colon (:). |
| MDMN-154771 | When you use wildcard characters for a date field in a filtered search and search for records, Supplier 360 SaaS doesn't return any search results. |
| MDMN-152935 | When you import data into business applications, the suggested target business entities in the **Map Fields** section aren't translated correctly into Japanese. |
| MDMN-152705 | When you unmerge a source record from a master record that has more than 20 contributing source records, the unmerge operation fails. |
| MDMN-150827<br>MDMN-150972 | When a source record of a deleted master record is updated with values similar to another master record, both master records appear as deleted records. You can't restore these deleted master records. |
| MDMN-150825 | When you match and export data, the business entity fields that you select for export aren't highlighted on the Select Values to Export page. |

| Issue | Description |
|---|---|
| MDMN-149003 | When you add a value to a picklist field in search filters, the following error appears:<br>`Enter a correct value. To see all the values, click View More.` |
| MDMN-148564 | When you filter records with validation errors, the filter value that you apply on the Search Results page isn't translated correctly into Japanese. |
| MDMN-148003 | When you create a record with dynamic field definitions and send it for approval, the edit mode of the workflow inbox doesn't display the dynamic field definitions. |
| MDMN-144769 | When you set a browser locale to German and you enter or paste a value in the date and time field, the value isn't saved and an error message appears. |
| MDMN-144268 | When records are ingressed with business IDs, the History page of the records doesn't show the event in the history feed.<br>(October 2024) |
| MDMN-131553 | When a picklist value contains multiple spaces between two characters, the spaces aren't retained after the value is added to a record and saved. |

## October 2024 fixed issues

| Issue | Description |
|---|---|
| MDMN-148241 | When you review a record in the workflow inbox, you can't update business entity record fields.<br>(October 2024) |
| MDMN-147828 | If you apply a saved mapping during a CSV file import, the import process doesn't map the fields. If you try to apply the saved mapping again, the import process maps the fields but displays following error:<br>`Cannot update metadata object. Supplied version of the object is out of date.` |
| MDMN-145562 | If your organization processes records that contain validation errors and you update and save any field in a record through the user interface, the existing fields with validation errors appear valid. However, the field values remain invalid. |
| MDMN-145077 | When you map population fields and run a file import job, the imported records don't display values for the population fields. |
| MDMN-143195<br>MDMN-143252 | When you select a dimension, measure, and filter to create a report, the lookup values appear incorrectly with empty spaces in the drop-down list. |
| MDMN-142786 | When you create a record through an approval workflow, the record isn't visible in the merge history activity report. |
| MDMN-137503 | When you create standard reports and apply any date field as a filter, the report data might appear inconsistent. |
| MDMN-136640 | When you drill down to the second level of a drill-down report that has only two levels of dimensions, the report data keeps loading instead of displaying the two levels of data. |

| Issue | Description |
|---|---|
| MDMN-130344 | When you enter values other than true and false for Boolean fields and search for records, the search results displays records that contain the specified values. |
| MDMN-126253 | When you create a report that displays merge history activity and select a dimension, the dimension remains highlighted even if you change your selection. |
| MDMN-124806 | When you specify a range to filter the report data of a drill-down report, the **Data Set** panel doesn't display the search results. |
| MDMN-124316 | A custom report that contains picklist fields doesn't display the updated field values after you update them in Reference 360. |
| MDMN-122818 | When you run a saved search, the search might not display all filter values that you selected by viewing more filter values for a field. |

## July 2024 fixed issues

| Issue | Description |
|---|---|
| MDMN-140618 | When you open multiple records, the History tab of the records displays duplicate history feeds. |
| MDMN-140068 | When users with a custom role try to edit a section that contains a read-only picklist, the picklist displays code instead of names. |
| MDMN-137109 | When you run an import job, MDM SaaS ignores the values for the fields named as `Message Type` even though the job succeeds. |
| MDMN-136999 | When you search for records with a search string that contains the tilde character `(~)`, business applications display an internal error. |
| MDMN-135891 | When you try to create a record in a business application, the form might take more than three minutes to load. |
| MDMN-134192 | When you search for records with a picklist value that contains parentheses by using a filtered search, the search results don't display the records. |
| MDMN-133533 | When you create a record, if you add a value within double quotes or parentheses in any searchable field, a business application displays an internal error instead of listing similar records. |
| MDMN-123321 | When you select a record in a hierarchy, the Dynamic Field Definition tabs from unrelated hierarchies might appear. |
| MDMN-122453 | The search request might fail if the search text starts with, includes, or ends with a space followed by the following special characters:<br>`+ - = && \|\| > < ! ( ) { } [ ] ^ " ~ * ? : \ /`<br>The following error appears:<br>`Search API Service Failed` |

## May 2024 fixed issues

| Issue | Description |
|---|---|
| MDMN-138862 | When you enrich a record that contains a nested field group using a data provider, the import fails. |
| MDMN-137420 | When you review an unmerge task in the workflow inbox, the source records appear as patch records instead of contributing records. |
| MDMN-131328 | When a field group in nested field groups has a picklist field without any other fields, the Source Records page doesn't display the field group value. |
| MDMN-130913 | When you try to edit or add a decimal field value that has trailing zeros and then save it, the trailing zeros are automatically removed. |

## April 2024 fixed issues

| Issue | Description |
|---|---|
| MDMN-133270 | When you create custom reports in an organization where the November 2023 preview functionalities are disabled, you can't create schedules to publish the reports. The issue occurs if you add facetable fields as dimensions and measures to your custom reports. Additionally, you can't view the report data on the report details page. |
| MDMN-132874 | When you try to load more hierarchies in the hierarchy tree, Customer 360 SaaS displays the same set of hierarchies instead of displaying the remaining hierarchies. |
| MDMN-132590 | When you remove a parent record that contains child records from a hierarchy using the **Remove the record only** option, the child record associations aren't removed from the record. When you try to open the hierarchy of the child records, the page doesn't open. |
| MDMN-132526 | When you preview a custom report that uses picklist fields as dimensions and measures, the preview fails with the following error:<br>`Service error. Can't preview the report. Try again later.` |
| MDMN-132524 | When you add charts as widgets to individual records, the **Add Widget** button on the record details page appears disabled. |
| MDMN-129308 | When you export the search results, you might get blank columns for the picklist fields in the nested field groups. The issue occurs when you don't have the preview feature to export the nested field group values enabled. |
| MDMN-122780 | If you add a space followed by a hyphen in a searchable field of a record, you can't save the record. |
| MDMN-121130 | When you update a record, the required dynamic root fields aren't validated in the sections that you don't edit. |
| MDMN-85717 | If the related records of a record appear in a table, the **Add Filter** option might not work as expected. |

## February 2024 fixed issues

| Issue | Description |
|---|---|
| MDMN-132961 | When you try to unmerge a record from another record and both records have at least two related records, the records might not unmerge. The issue might occur when the business entity contains 1 million records or more. |
| MDMN-131385 | When you import data, if the imported data contains updates to the picklist values of existing records, the import job fails. |
| MDMN-130897 | The dependent picklist values might not change if you change the parent picklist value multiple times. |
| MDMN-130923 | When you use a custom page that has create, read, and update privileges for the fields in one panel and only read privileges for the fields in another panel, you can't create a record. |
| MDMN-129712 | When the deduplication criteria is set for a field group and the field group IDs in records contain a period (.), only one field group entry survives even though other entries with a period (.) aren't duplicates. |
| MDMN-129587 | When you enable the November 2023 preview functionalities of custom reports in your organization, the edit icon doesn't appear for reports that are created for individual records. |
| MDMN-128931 | When you export records, the exported data doesn't include the `ID` column for the field groups and nested field groups that contain only picklist fields. This issue occurs when the preview feature to export the nested field group values is enabled. |
| MDMN-128797 | When you export records with validation errors, the exported data doesn't contain error messages for picklist fields. This issue occurs when the preview feature to export records with validation errors is enabled. |
| MDMN-128691 | When you import records with field values that contain multibyte characters, the import job fails at the transform step and the following error appears:<br>`Disnext_internal_error_An internal server error has occurred.` |
| MDMN-127570 | When you filter a report that displays validation errors of records, you can't view filter values for the types of validation errors and severity of errors. |
| MDMN-124006 | When the operation type header in the CSV file contains space and special characters, the import process ignores the operation type values. |
| MDMN-121531<br>MDMN-117430 | When a record goes through a custom approval workflow, the task details of the record don't appear. |
| MDMN-116697 | You can't view some fields on the dimensions, measures, and filter lists for custom reports that are based on validation errors. These fields are hidden behind the horizontal scroll bar. |
| MDMN-107781 | When you review a task that has an updated address, the task displays an unenriched address. |
| MDMN-72924 | When you try to stop a job during the load phase, the job stops only after the load phase completes. |

### January 2024 fixed issues

| Issue | Description |
|---|---|
| MDMN-128210 | When you expand a search result, the fields display incorrect values. |
| MDMN-125108 | When you enable the November 2023 preview functionalities of custom reports in your organization, you can view, edit, and refresh report data when the fields used in custom reports are enabled as reportable. |
| MDMN-123933 | When you create a custom report, the names of the fields that you set as dimensions appear incorrectly on the applied filters section of the **Data Set** panel. |
| MDMN-121688 | If you create custom reports based on validation errors, the dimensions, measures, and filter lists appear empty for business entities that don't have any records. |
| MDMN-120211 | Even though your user role doesn't have the update privilege, you can assign a record to a hierarchy node after you move the record within the hierarchy. |

### December 2023 fixed issues

| Issue | Description |
|---|---|
| MDMN-122357 | When you export search results, you can't export nested child field groups to the CSV file. |
| MDMN-99204 | When you try to import records into a hierarchy, if the input file doesn't contain the instance details for the records, a preview error appears. |

## Known issues

The tables in this section describe known issues for MDM - Supplier 360 SaaS. Not all monthly releases include known issues.

## October 2026 known issues

| Issue | Description |
|---|---|
| MDMN-210490 | When you match and import selected data, rule associations don't run on the records in the input file before the match process. The match process might therefore not use values that the rule associations enrich.<br>For example, if a rule association concatenates the first name and last name fields to populate the full name field, the full name field remains empty for input records that don't contain a full name. The match process can't match these records based on the full name field. |
| MDMN-222559 | When you import records from a file that includes both update and delete operations on specific fields in multiple entries of the same field group, the delete operations fail.<br>For example, a record with the name John has a home entry and an office entry in the address field group. If you run a file import job that updates the city value in the home entry and deletes the state value in the office entry, the job updates the city value. However, the job doesn't delete the state value.<br>Workaround: Import records in two separate files, one for the update operations and one for the delete operations. |
| MDMN-211306<br>MDMN-211305 | In a report, if you set the dimensions, measures, or filters to error type or error severity, the report might display incorrect data. |
| MDMN-193466 | When you filter records that are related with business entity record fields in the related records table, a filter value that contains a parenthesis, asterisk, or square bracket returns an error or incorrect filter results.<br>Workaround: Add a backslash before these special characters in the filter value. For example, to find related records that contain the value Corva (US) in the Company field, enter Corva \(US\) instead of Corva (US). |

## July 2026 known issues

| Issue | Description |
|---|---|
| MDMN-217628 | On the Edit in Table page, MDM SaaS validates only the first 25 records when the page loads. The Submit button is enabled even if later records have blocking errors.<br>Workaround: Before you click Submit, scroll through all the records to trigger validation. |
| MDMN-211947 | In the classic experience of the Workflow Inbox page, the option to delete redundant tasks for a merged record pair isn't available.<br>Workaround: Use the new experience of the Workflow Inbox page to delete redundant tasks for a merged record pair. |
| MDMN-208046 | When you use the Blank and Not blank filters on field group columns of the Edit in Table page, incorrect results appear. |
| MDMN-206510 | When you submit record drafts from the Edit in Table page, the submission fails if the same records were updated on another page after you created the drafts.<br>Workaround: Discard the record drafts that have conflicts. |

## April 2026 known issues

| Issue | Description |
|---|---|
| MDMN-205609 | The new experience of the Source Records page doesn't display match rule descriptions in the Record Pairs section.<br>Workaround: Use the classic experience of the Source Records page to view match rule descriptions in the Match Pair Details section. |
| MDMN-200002 | After you upload a CSV file to update only the fields that contain values and select the target relationships, MDM SaaS doesn't indicate the required fields for the relationships. |
| MDMN-197399 | When you enable source records and their patch records for matching, the match process enables the source records but excludes their patch records. |
| MDMN-195716 | When you select fields from nested field groups and export search results, the exported data contains duplicate rows of the field values instead of unique rows for the selected fields. |
| MDMN-194941 | After you search for records, when you customize the filters to add or remove dynamic fields, MDM SaaS doesn't display all dynamic fields on the initial load.<br>Workaround: To view all the fields, click the Load More option. |
| MDMN-189242 | When you import a CSV file and update only fields that contain values, ensure that you map all the required fields in the section. Otherwise, you can't proceed to the next step. |

## October 2025 known issues

| Issue | Description |
|---|---|
| MDMN-179790<br>MDMN-169071 | Fields in a record might display validation errors even though the fields pass validation. Also, a record continues to be in the Exception status even though you resolve the error that caused the Exception status. |
| MDMN-185369 | The export of search results fails when the search results include records with the Validation Errors or Exception status. |
| MDMN-185142 | When you edit a field group entry with a custom ID, the validation errors in another field group entry might disappear. |
| MDMN-184564 | When a rule association that automatically adds records to a hierarchy fails with the Exception status, the Data Quality status displays the status of the rule association as Exception, but the master record appears valid. |
| MDMN-184038 | The Record State system field mapped in a rule association always returns the active state of a record instead of the value of the record state indicator. |
| MDMN-183452 | After you update a record in the user interface, the validation errors disappear even though you don't correct the data that caused the errors. |
| MDMN-188495 | When you merge two records, if any record contains space or tilde (~) special character in the source primary key of a field group an error message appears on the merge screen. This issue occurs in the new experience of the merge screen when you expand the field group. |
| MDMN-188498<br>MDMN-188500 | After you import records that contain space or tilde (~) special character in the source primary key of a field group and if you edit the records and save, the changes are not saved. |

## July 2025 known issues

| Issue | Description |
|---|---|
| MDMN-174232 | On the relationships list panel of a hierarchical record, when you use the Between operator to filter the parent and child records based on integer values, the records might not be filtered.<br>Workaround: To apply the filter values, click outside the filter instead of pressing Enter. |

## April 2025 known issues

| Issue | Description |
|---|---|
| MDMN-160543 | After you merge hierarchy records, the merge history activity reports don't display the merged records. |
| MDMN-157663 | When you perform a search, the search takes longer than usual to display search results. |

## February 2025 known issues

| Issue | Description |
|---|---|
| MDMN-158446 | When you enrich a field value with data from an external data provider, such as Duns & Bradstreet, the change doesn't trigger workflows configured for the field. The enriched value is submitted directly without approval. |
| MDMN-156264 | When you save a search after you select the filter values of a picklist by viewing more filter values, the saved search doesn't include the filter values of the picklist. |
| MDMN-155467 | When you filter records based on a field within a nested field group, the search results don't exactly match the filter condition. |

## November 2024 known issues

| Issue | Description |
|---|---|
| MDMN-151607 | In the view mode of a record, the restricted field icon continues to appear for a field even after the read privilege is granted to the field. |
| MDMN-152293 | On the search results page, when you manually add an existing field with trailing spaces as a filter value, the following error appears:<br>`Enter a correct value. To see all the values, click View More.`<br>Workaround: To include an existing field with trailing spaces as a filter value, click **View More**, and select the value that you want to apply as a filter. |
| MDMN-151684 | When you filter records based on a field in a nested field group, business applications return records that don't exactly match the filter condition. |

## October 2024 known issues

| Issue | Description |
|---|---|
| MDMN-151813 | When you filter records based on blank values for a field within a nested field group, the search results might not display any records. This issue occurs when the field contains values in some field group entries and doesn't contain any in other entries. |
| MDMN-149629 | When you set the browser locale to en_AU, pt-BR, ru, ko, th, zh-CN, or nl, the Point in Time field on the Hierarchies page doesn't use the date and time format of the browser locale. |
| MDMN-147080 | When nested field group entries from different source systems have the same field group ID, the values don't appear side by side on the Source Records page or the Merge Records page.<br>Workaround: Ensure that the field group IDs are unique across source systems. |

## July 2024 known issues

| Issue | Description |
|---|---|
| MDMN-146842 | When you delete an address entry from a record that contains three or more address entries, an additional entry is deleted. The issue might occur if fields of the Address field group were previously used as deduplication criteria.<br>Workaround: Wait for at least one hour, and then delete the address entry. If the issue persists, contact Informatica Global Customer Support. |
| MDMN-145992 | When users with a custom user role try to open records that contain calculated fields for which they don't have read privileges, the following error message appears:<br>`Failed to retrieve the search results.` |
| MDMN-144216 | When you export reports based on record metadata, you can't export more than 10,000 records. |
| MDMN-144048 | When you filter search results for active and deleted records, if you try to manually add values from the records as additional filter values, the following error message appears:<br>`Enter a correct value. To see all the values, click View More.`<br>Workaround: To include additional filter values, click **View More**, and select the value that you want to apply as a filter. |
| MDMN-144010 | After you validate records that were merged in real-time and unmerge them, they display an incorrect match rule and outcome. |
| MDMN-141593 | In a related records table that displays records related through a business entity record attribute, you can't create or update records when you add or edit a decimal field type value. |
| MDMN-141345 | In a related records table that displays records related through a relationship, you can't filter records when you select the Equals operator and enter a double field type value. |
| MDMN-140813 | When a record has one field group entry and you delete that entry, the master record on the source records page doesn't display the deleted entry with the icon that indicates deletion. |
| MDMN-139443 | When you create a report with dimensions and measures set as error type, the report displays an incorrect error count. |

| Issue | Description |
|---|---|
| MDMN-136942 | When you edit records in bulk and leave a required field blank, the records are saved successfully. Patch records that contain fields with no values are created for this change. The issue occurs if record validation is enabled for business applications. |
| MDMN-130393 | If you delete source records after you create a report that displays merge history activity, the metrics might display incorrect number of records processed. The metrics are displayed incorrectly for one of the following reasons:<br>- If the number of records ingested in real-time is added to the metrics count.<br>- If the previous process events job contains failed records, then the failed records are included in the subsequent job and are displayed in the metrics. |

## May 2024 known issues

| Issue | Description |
|---|---|
| MDMN-114809 | When you edit a table row in a record section, you can't select values or move your cursor inside the fields of the row by using the arrow keys on your keyboard.<br>Workaround: Exit edit mode and try to edit the row again. |

## April 2024 known issues

| Issue | Description |
|---|---|
| MDMN-140112 | When you merge or unmerge records, you can't view the field group values of records that don't contribute to the master record. The issue also occurs when you review the records in a merge task. |
| MDMN-138576 | When you open a merge task and preview merged records, source records that aren't part of the merge task don't appear. |
| MDMN-137821 | When you run a saved search, you might get the following error:<br>`Search API service failed.`<br>Workaround: Contact your administrator. |
| MDMN-137503 | When you create standard reports and apply any date field as a filter, the report data might appear inconsistent. |
| MDMN-136966 | On the report details page, if you view the additional details of reports in an organization that doesn't have any reports, the following incorrect error message appears:<br>`Something went wrong when we tried to render this page.`<br>Workaround: You can safely ignore the message. |
| MDMN-136640 | When you drill down to the second level of a drill-down report that has only two levels of dimensions, the report data keeps loading instead of displaying the two levels of data. |
| MDMN-136058 | When you add the **Customer Distribution by State** report as a widget and then select other reports multiple times, you can't preview the charts associated with the selected reports. The issue occurs if the **Customer Distribution by State** report doesn't contain any data. Additionally, the chart preview fails on the preview panel with the following error message:<br>`Something went wrong when we tried to render this panel.` |

| Issue | Description |
|---|---|
| MDMN-135879 | When a user with 60 or more user roles tries to open Supplier 360 SaaS, it fails to open. |
| MDMN-134622 | The total count of validation errors and warnings increases when you expand each level in nested field groups. |
| MDMN-132312 | If you publish an event that is related to an action on a record and the exported data contains more than 65,000 characters, the exported data doesn't include the complete record. |

## February 2024 known issues

| Issue | Description |
|---|---|
| MDMN-130814 | After you import a record that includes a field group ID with a period (.) into MDM SaaS, you can't edit the field group entry on the MDM SaaS application user interface.<br>Workaround: To edit these field group entries, perform a PATCH operation by using REST APIs. Also, before you import new records, ensure that the field group IDs in the records don't contain special characters other than the following special characters:<br>- _ \| : |
| MDMN-129928 | If a child record in a hierarchy has its parent record as a child, you can't perform a search on the hierarchy. |

## December 2023 known issues

| Issue | Description |
|---|---|
| MDMN-128933 | When you export records with validation errors, the exported data contains error messages with field names that don't match the field names in the column headers of the field groups and nested field groups. This issue occurs when the preview feature to export the records with validation errors is enabled. |
| MDMN-128036 | When you add a predefined dashboard that displays an overview of MDM SaaS usage statistics, the total number of source records doesn't include the patch records of the master records. |

## November 2023 known issues

| Issue | Description |
|---|---|
| MDMN-127577 | When you create a report based on the types of validation errors and apply **Fields with Validation Errors** as a filter, the report data displays all types of validation errors irrespective of the applied filter. |
| MDMN-127450 | When you import data, records with incorrect population names aren't rejected at the Load step. However, the Generate Tokens step fails. |
| MDMN-126388 | When you import business entity records that have field values calculated based on related records, the process takes a long time to complete. |

| Issue | Description |
|---|---|
| MDMN-126263 | When you filter a report that displays merge history activity based on a declarative rule name, you might view duplicate rule IDs as filter values. The duplicate rule IDs appear when a declarative rule has multiple versions and the rule doesn't have a description. |
| MDMN-125796 | When you create a report that displays merge history activity based on the users who merged the source records or the merged date, the report displays incorrect data. |
| MDMN-124933 | When you create a report that displays merge history activity based on the match outcome, you can't view the number of source records merged by users that are sent for approval. These records are included in the total number of source records merged by users. |
| MDMN-124552 | If you delete source records after creating a report that displays merge history activity, the report data doesn't exclude the deleted source records even if you refresh it. |
| MDMN-123888 | In a drill-down chart, if you select a field value that also appears as an additional filter value on the **Data Set** panel, you can't drill down into the report data. |
| MDMN-119521 | When you download the error report from the load step of a file import job, the error message fails to display the specific field you don't have access to. |

## October 2023 known issues

| Issue | Description |
|---|---|
| MDMN-123478 | When you add a child record to a hierarchy, there is no information that the changes to the dynamic field definitions aren't inherited yet. |
| MDMN-121153 | If you enter values other than integers in the search box to find records with numeric field values, the search request might fail, and the following error appears:<br>`Search API Service Failed` |
| MDMN-120966 | After you delete a hierarchy, the hierarchy still appears in the **Hierarchy** tab of a record that belongs to the hierarchy. The issue occurs if you can assign records to parent nodes in a hierarchy. |
| MDMN-114485 | When you search for a record that has a searchable field with no value, the record doesn't appear in the search results. The issue occurs if optional fields are searchable. |
| MDMN-108878 | System fields that display the date and time, such as Created On, Last Updated Date, or Last Updated Date, display values in the Unix epoch time format. |
| MDMN-92566 | You can view a maximum of 40 entries for a field group in the source records section. |

## September 2023 known issues

| Issue | Description |
|---|---|
| MDMN-120464 | After you fix a few validation errors in a record, a custom report based on the type of validation errors might display incorrect data. |

## August 2023 known issues

| Issue | Description |
|---|---|
| MDMN-119507 | When you merge duplicate field group values based on the deduplication criteria, the surviving field group values aren't highlighted on the Source Records page. |

## July 2023 known issues

| Issue | Description |
|---|---|
| MDMN-118378 | When you override the values of a field group that has field groups nested within it with a field group that has no nested field groups, the nested field groups might not appear on the Source Records page. The issue occurs if block survivorship is enabled for a field group that has field groups nested within it. |
| MDMN-117106 | After you approve a task to unmerge multiple source records from a master record, you can't see the corresponding closed task.<br>Workaround: To view the closed task, refresh the Task Details page. |
| MDMN-114699<br>MDMN-140891 | When a dependent picklist field in a record contains a null or an invalid value, you can't save any changes to the record. On the Record Details page, the Submit button appears disabled.<br>Workaround: On the Record Details page, select a valid value for the dependent picklist field and submit the changes. |

## May 2023 known issues

| Issue | Description |
|---|---|
| MDMN-105669 | If you select all the records to edit in bulk and then clear some selections, the preview table shows an incorrect number of selected records. |
| MDMN-105579 | When you try to edit records in bulk, you can't edit the values of field groups that are empty. |
| MDMN-105542 | When you edit records in bulk, if no records match the specified conditions, a message about multiple records being updated is incorrectly displayed. |
| MDMN-105191 | When custom role users having a data access rule and select records to edit in bulk, the preview table shows an incorrect number of selected records. |

## April 2023 known issues

| Issue | Description |
|---|---|
| MDMN-117820 | When you press Tab to navigate out of a blank date field, the following error incorrectly appears:<br>`Enter a valid value.`<br>Workaround: Refresh the browser window. |
| MDMN-100751 | After you delete a picklist value of a record in the related records table, the record continues to display the previous value. |
| MDMN-100644 | In a Related Records table, when you select a value from a parent picklist, the dependent picklist includes the potential values for all the parent picklist values. |

## February 2023 known issues

| Issue | Description |
|---|---|
| MDMN-97765 | When you translate a custom report, some of the translations in the chart are not translated, and translations fall back to English. |
| MDMN-93203 | When you select multiple records on the search results page for performing actions, such as exporting, manually merging, editing selected records, there might be a discrepancy between the number of selected records and the number available for action. |

## January 2023 known issues

| Issue | Description |
|---|---|
| MDMN-94729 | When you import data with integer fields, and if the value of an integer field exceeds the maximum limit of 2147483647, the import fails.<br>Workaround: Use text fields instead of integer fields if the value of an integer field exceeds the maximum limit and import the data again. |

## September 2022 known issues

| Issue | Description |
|---|---|
| MDMN-85676 | When you update a record, the information or warning messages that appear might contain fields that aren't present in the record. |

## August 2022 known issues

| Issue | Description |
|---|---|
| MDMN-83763 | If the name of a newly created custom report uses the name of a custom report that was deleted earlier, the newly created custom report displays the report data of the deleted custom report in the report table.<br>Workaround: Publish the newly created custom report to view the correct report data. |

## July 2022 known issues

| Issue | Description |
|---|---|
| MDMN-79703 | When you submit a task and try to claim the same task for approval, an error message appears, indicating that the initiator and the approver are the same. |

## June 2022 known issues

| Issue | Description |
|---|---|
| MDMN-76259 | When you use your business application or external APIs to create records, you cannot specify the population. Your application and the APIs use the default population. |

## April 2022 known issues

| Issue | Description |
|---|---|
| MDMN-71971 | Some users cannot view the history of records when they click the **History** tab. |
| MDMN-71234 | You can override a dependent picklist field value for a master record without overriding its parent picklist field. |
| MDMN-71028 | When you override the field values that are part of the search result layout, the overriding field values do not appear on the search results page. |
| MDMN-70998 | When you override the First Name, Middle Name, or Last Name fields for a master record, the Full Name field does not display the overriding field values. The Full Name field uses the concatenated values of the First Name, Middle Name, and Last Name fields. |
| MDMN-69555 | When you ingress more than one thousand records with the business ID values, the records use the automatically generated business ID values instead of the user-defined business ID values. The mismatch in the business ID values creates multiple master records and causes performance issue. |
| MDMN-62330 | When you delete a custom report and create another report with the same name and publish it, the report data displays even before you create a schedule for it. |
| MDMN-62221 | If you try to open a hierarchy when data is being imported into the hierarchy, the hierarchy does not appear. |

| Issue | Description |
|---|---|
| MDMN-61921 | When you filter the history of a record that has a large number of historical changes, the performance is poor. |
| MDMN-61094 | For a supplier, when you try to add related records with the *Supplier to Contact* relationship, the asterisk (*) wildcard character does not display any search results.<br>(April 2022) |
| MDMN-56397 | When hierarchy properties are updated, the workflow task that is generated doesn't include a description of the updates. |
| MDMN-54522 | For a supplier that has multiple addresses in different countries, when you sort the addresses by country, you do not get expected results.<br>(April 2022) |
| MDMN-59326 | When you unmerge a record, a workflow is triggered and the record unmerges successfully after the approval. If you merge these unmerged records and try to unmerge these again, the unmerge fails after the approval. |
| MDMN-57513 | When you run the match and merge job for the records in Business 360 Console and unmerge some records from the imported records in Supplier 360 SaaS, the History panel of the unmerged records does not list the merge and unmerge actions. |
| MDMN-55314 | The users with custom user roles can view the **Hierarchies** page and the **Hierarchies** tab on the record details page even though they don't have the required privilege to view it. The following incorrect error messages appear when the users with custom user roles click **Hierarchies**:<br>`Error:Error:Request failed with status code 403`<br>`Error: Request failed with status code 403` |
| MDMN-50767 | When you import data that contains decimal fields, the decimal values might incorrectly round off in the imported records. |
| MDMN-49443 | When you import records that contain invalid values in the decimal fields, the import process doesn't reject the records. |
| MDMN-45870 | When you perform a search for a negative value, the search results include positive values and negative values. For example, if you search for `-92.7`, the search results include records that have `92.7` and `-92.7`. |
| MDMN-41429 | You cannot add an image to a record by entering a URL in the **Image** field. |
| MDMN-39157 | If a user marks records as not a match and approves the changes without first saving it, the changes are not saved. You can view the records that were marked as not a match on the Source Records page. |
| MDMN-39035 | When you edit the Full Name field and submit, the updated data does not appear when the update is approved.<br>Workaround: Configure Full Name field as read only in Business 360 console. |
| MDMN-39029 | When you try to import a file without selecting any target business entity or relationship, you receive multiple copies of the same error message. |

| Issue | Description |
|---|---|
| MDMN-38756 | You cannot import relationships between two records that belong to different source systems. |
| MDMN-37666 | When you edit the first name, middle name, or last name of a Person record, the record title does not match with the full name. |
| MDMN-31960 | Validated and Enriched indicator appears in the Address, Email and Phone sections of imported records even though data is not validated. |
| MDMN-31007 | In a record, when a phone number includes alphabetical characters, the phone number doesn't get validated. |
| MDMN-29299 | The concatenated value of a field does not change when you change the input values to null. |
| MDMN-23426 | When you import data, if your CSV file contains boolean field values other than `true` or `false`, some records might not be imported. |

# Informatica Global Customer Support

You can contact a Global Support Center through the Informatica Network or by telephone.

To find online support resources on the Informatica Network, click **Contact Support** in the IDMC Help menu to go to the **Cloud Support** page. The **Cloud Support** page includes system status information and community discussions. Log in to Informatica Network and click **Need Help** to find additional resources and to contact Informatica Global Customer Support through email.

The telephone numbers for Informatica Global Customer Support are available from the Informatica web site at https://www.informatica.com/services-and-training/support-services/contact-us.html.
